NEPALI YOUTH IN FIGURES

December 2014

This report, highlighting data specific to youth in Nepal, is based on the Population and Housing Census 2011 provided by the Central Bureau of Statistics of the Government of Nepal.

The information in this publication does not reflect the policies of the Ministry of Youth and Sports, the United Nations Population Fund and Restless Development. The information in this document can be shared and republished by quoting the name of the publishers.

PREFACE

Government of Nepal
MINISTRY OF YOUTH AND SPORTS

Kamalpokhari, Kathmandu
Nepal

Ref. No. :

Date :

The Government of Nepal defines 'youth' as people between 16-40 years of age, which accounts for 40.33% of the total population as according to the Population and Housing Census Report of 2011. The Ministry of Youth and Sports (MoYS) in Nepal introduced a National Youth Policy in 2010. The National Youth Policy references the participation of youth in national restructuring and sustainable development as one of government's main priorities. The policy aims to create a qualitative role for young people to contribute to building a prosperous, modern and just Nepal. It also seeks to mainstream young people in national development, through meaningful participation, capacity and leadership development.

The Central Bureau of Statistics (CBS) reported through the Population and Housing Census the collective data related to different diverse features of the national population of Nepal. There is no separate data set related to youth. In the absence of baseline data regarding youth and youth's effective participation policy makers, decision makers and development partners have struggled to prioritize how to support youth development effectively. Realizing this, the MoYS together with the CBS, UNFPA, the United Nations Population Fund and Restless Development Nepal has initiated this dataset that focuses on facts and figure related to the Nepali youth.

This youth dataset presents the distribution of youth population by age groups 16-25 & 26-40 and sex ratio. It also depicts the literacy status of youth vis-à-vis the educational status, employment, disability, marital status, fertility rate, access to modern information technologies etc. The data available from CBS of 75 districts was later disaggregated to represent region, zones, and ecological belts. I strongly believe that, this analytical dataset will be an important source of information to progressively ensure investments for the holistic development of youth in Nepal.

I take this opportunity to thank UNFPA and Restless Development for providing technical and financial support to this idea. This publication is made possible through the collective efforts of colleagues from MoYS, CBS, UNFPA, Restless Development and the agency which analyzed the dataset; FACTS Research and Analytics. Personally, I am very grateful to colleagues at the CBS, for giving us the forum to extract the data sets from their data bank. In addition, Mr. Min Basnet's effort as an independent consultant to extract the youth data is really praiseworthy.

On behalf of MoYS, I would like to thank all the members who were involved in the process of this important work including my colleagues at the Ministry.

I hope the importance of this work will reach its momentum once policymakers and programmers and planners use this document.

Thank you,

December 2014

Deependra Nath Sharma
Secretary

Secretary

EXECUTIVE SUMMARY

In Nepal, the National Population and Housing Census is carried out at decennial intervals to identify detailed information about the size and structure of the population. According to the last census carried out in 2011, the total population of Nepal is 26,494,504 of which 10,689,842 are youth aged 16-40 years, the age definition of youth as per the Ministry of Youth and Sports (MoYS). The total youth population of Nepal includes 54.5% of female population and 45.8% of male population. Similarly, the sex ratio among the youth is 84 males per 100 females. Literacy rate of 16-25 years age group is 80% whereas it is 61.3% for 26-40 years age group. Out of the total youth, 748,000 males and 644,000 females have passed the School Leaving Certificate (SLC) or its equivalent degree.

1,475,692 youth (i.e. nearly 14% of the total youth) have been found to be abroad for employment and education. 162,548 youth (i.e. 1.52% of the total youth) have some kind of disability, of which 55% are males and 45% are females. In terms of usual activities performed by youth, the proportion of male population aged 16-25 years engaged in study is 50.06% whereas 37.21% of those in 26-40 years age group are engaged in waged/salaried work. However, the highest proportion of the female youth of 16-25 years and 26-40 years age group are engaged in study (37.53%) and household chores (39.2%) respectively.

Similarly, nearly 50% of the total male population and 42% of the total female population aged 16-25 years is economically active whereas in the age group of 26-40 years the proportion of economically active population is nearly 94% for males and 66% for females. In terms of occupation, the highest proportion of the youth population i.e. around 40% males aged 16-25 years as well as 26-40 years, and 70% of the female populations from both age groups are engaged in agricultural, forestry and fishery related work.

Education has been found as the major reason for 93.56% males and 60.67% females of 16-25 years age group, and 50.58% males of 26-40 years age group for not being economically active whereas household work is the main for 91.73% females of 26-40 years age group for not being economically active.

KEY HIGHLIGHTS

TOTAL POPULATION AND HOUSEHOLDS

The total population of Nepal as of the Census day on June 22, 2011 was estimated at 26,494,504. Among them, 51.5% were females and 48.5% were males. The total number of households in the country was 5,427,302, including 5,423,297 individual households and 4,005 institutional households. The highest population was found in Kathmandu district (1,744,240) and lowest in Manang district (6,538). Likewise Kathmandu district had the highest number of households (436,344) and Manang had the lowest (1,480).

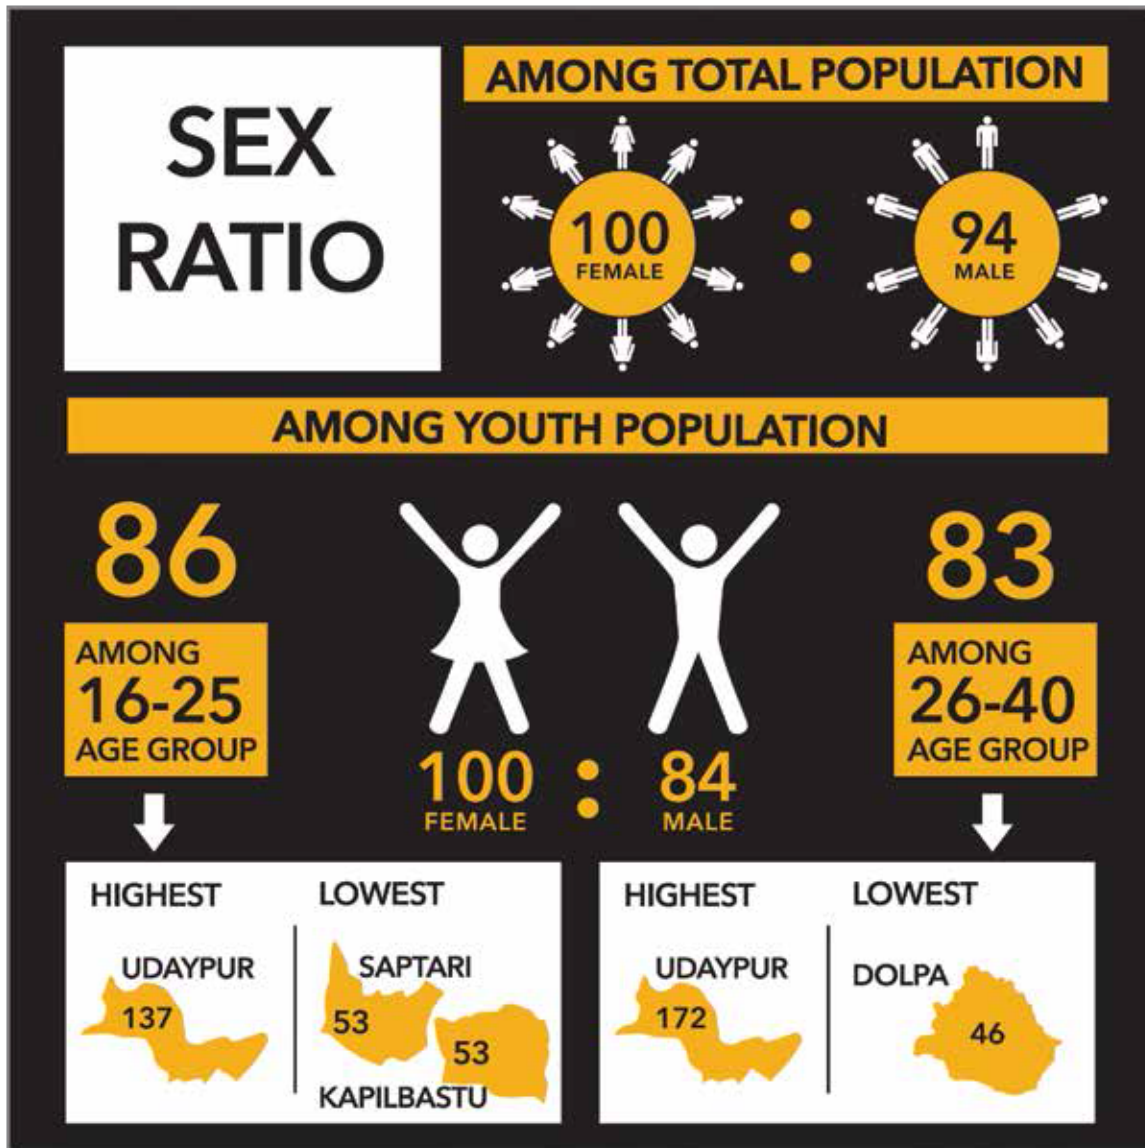

YOUTH POPULATION

Population of the 16-40 years age group is considered as the youth population in Nepal. According to the 2011 Census, the total youth population in Nepal is 10,689,842 (40.3% of the total population). Among them, 45.8% are males and 54.5% are females. Kathmandu district has the highest proportion of the youth population i.e. 52.9% whereas Pyuthan district has the lowest proportion of youth population i.e. 32.7% to its total population.

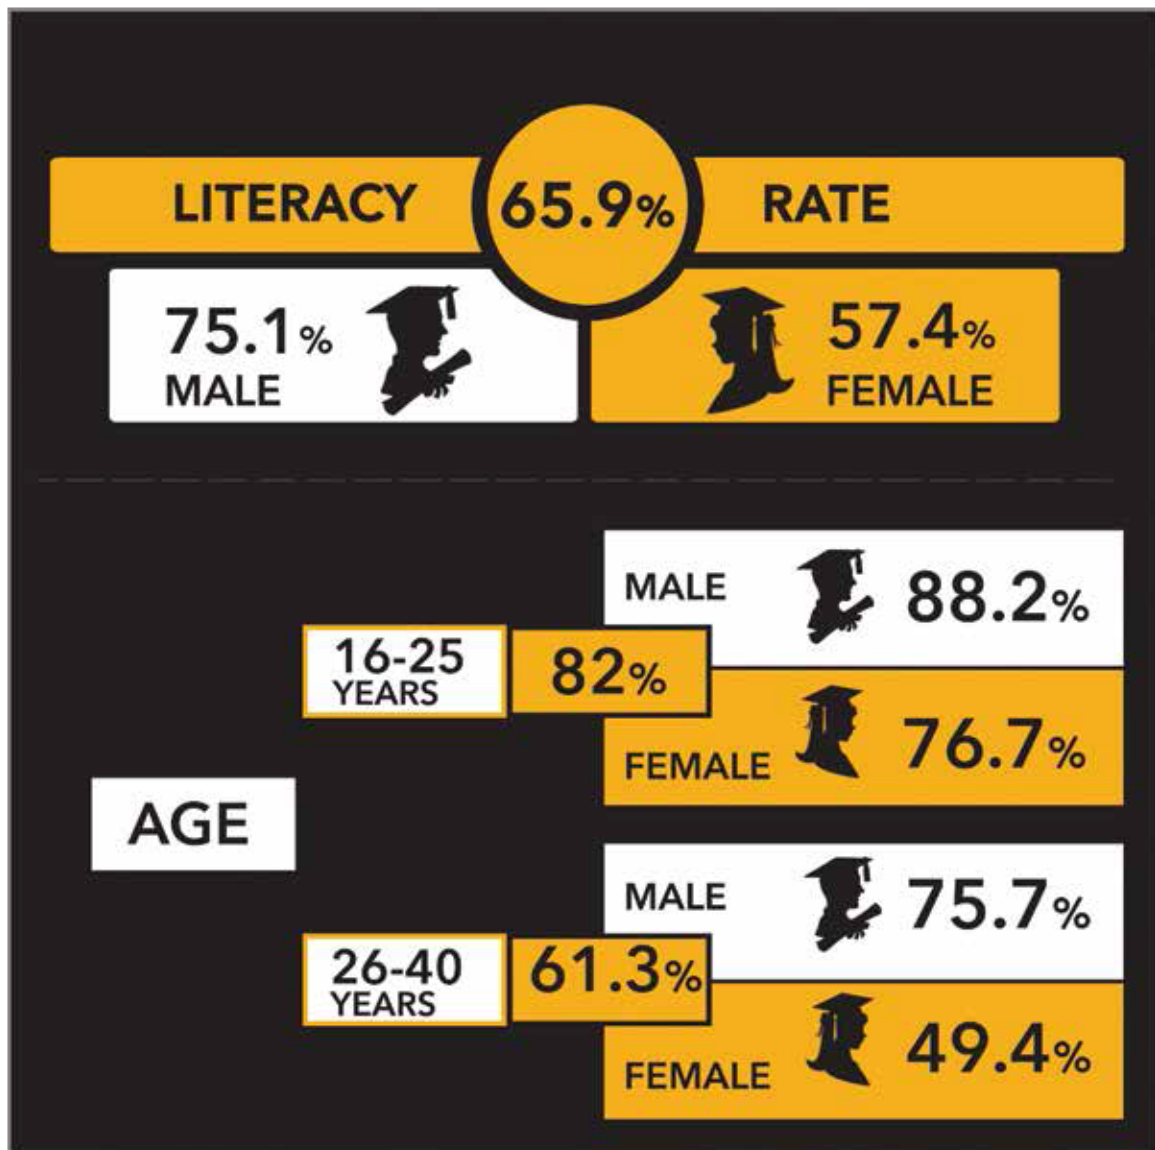

SEX RATIO

The sex ratio is the number of males per 100 females. According to the National Population and Housing Census 2011 in Nepal, the sex ratio was estimated at 94. Among the youth, this ratio is 86. By broad age group, this figure is 86 for the population aged 16 to 25 years and 83 for population aged 26-40 years. The highest sex ratio was found in Udaypur district for both age groups 16-25 years (137) and 26-40 years (172) and the lowest was observed in Saptari and Kapilbastu districts for age group 16-25 years (53) and Dolpa district for age group 26-40 years (46).

LITERACY STATUS

The overall literacy rate for Nepal (for the population aged 5 years and above) was 65.9% in 2011. Male literacy rate remained 75.1% as compared to female literacy rate of 57.4%. By broad age group of youth population, the literacy rate is more (82.0%) for age group of 16 to 25 years than the age group of 26 to 40 years (61.3%). The same pattern is observed in the literacy rate of these age groups by sex as well. The male and female literacy rates for the age groups of 16-25 years are 88.2% and 76.7% respectively whereas these rates are found at 75.7% and 49.4% for the population of age group 26-40 years.

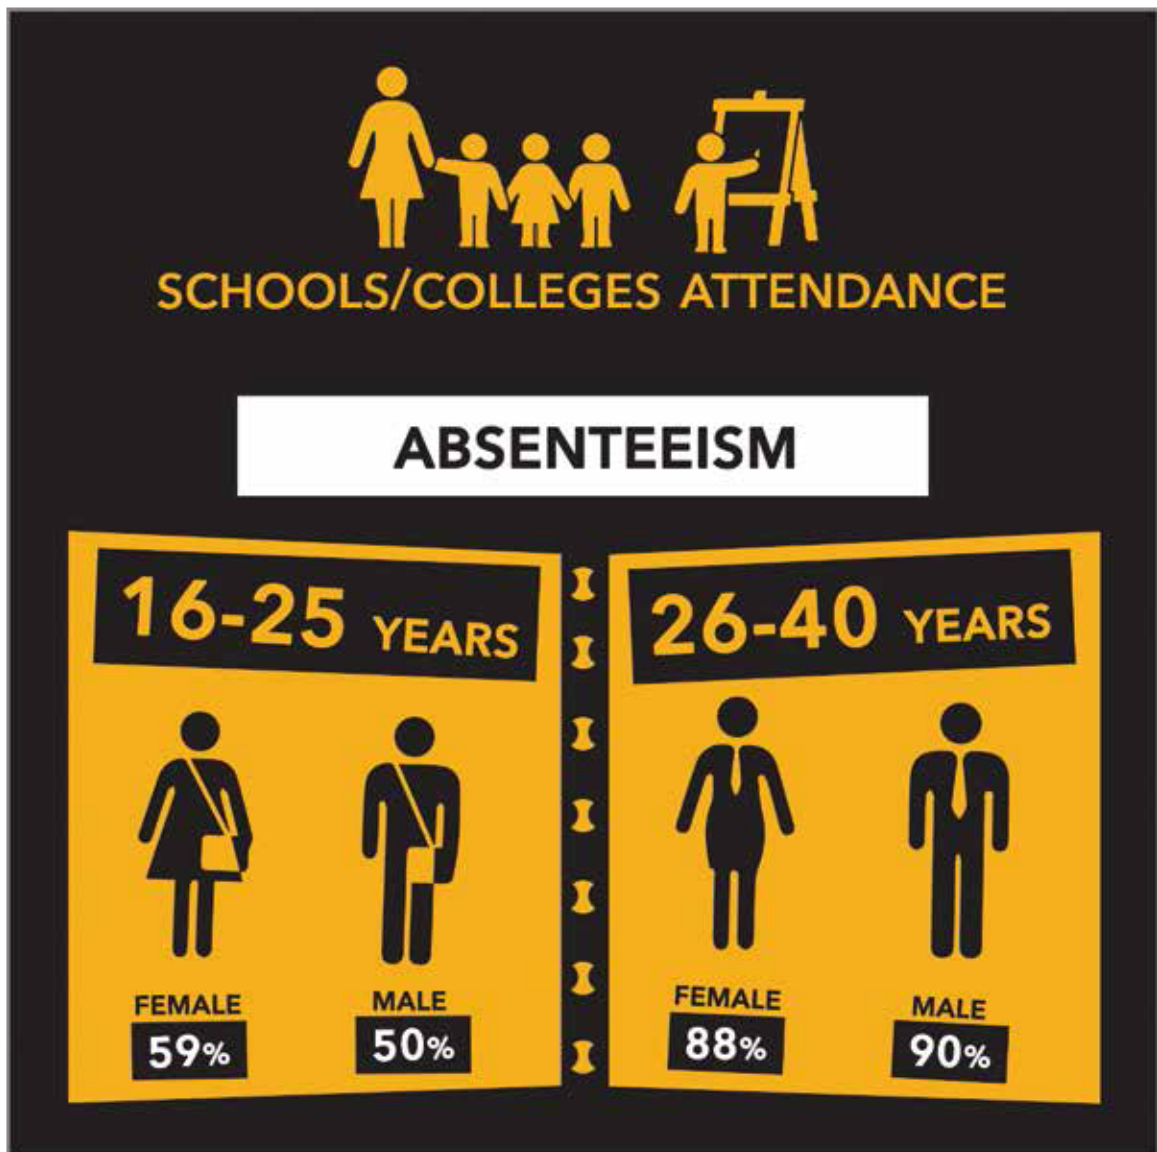

EDUCATIONAL ATTAINMENT

In 2011, nearly 462 thousand males aged 16 to 25 years reported that they had passed SLC or its equivalent degree as the highest degree they had ever received whereas this number had remained around 441 thousand for females. Likewise, for age group of 26 to 40 years, the number of males and females that have attained SLC or equivalent as the highest degree is around 286 thousand and 203 thousand respectively. The number of male population aged 16-25 years that have gained postgraduate or equivalent degree is 10 thousand whereas this figure is nearly 66 thousand for age group of 26-40 years. Similarly, the number of females aged 16-25 years and 26-40 years that have passed postgraduate or equivalent degree are around 8 thousand and 24 thousand respectively.

SCHOOLS/COLLEGES ATTENDANCE

On the Census day in 2011, nearly 50% of the male population aged 16-25 years reported that they were not currently attending school. This figure is 88% for age group of 26-40 years. In the same way, the female population of age groups 16-25 years and 26-40 years that have not attended school is 59% and 90% respectively.

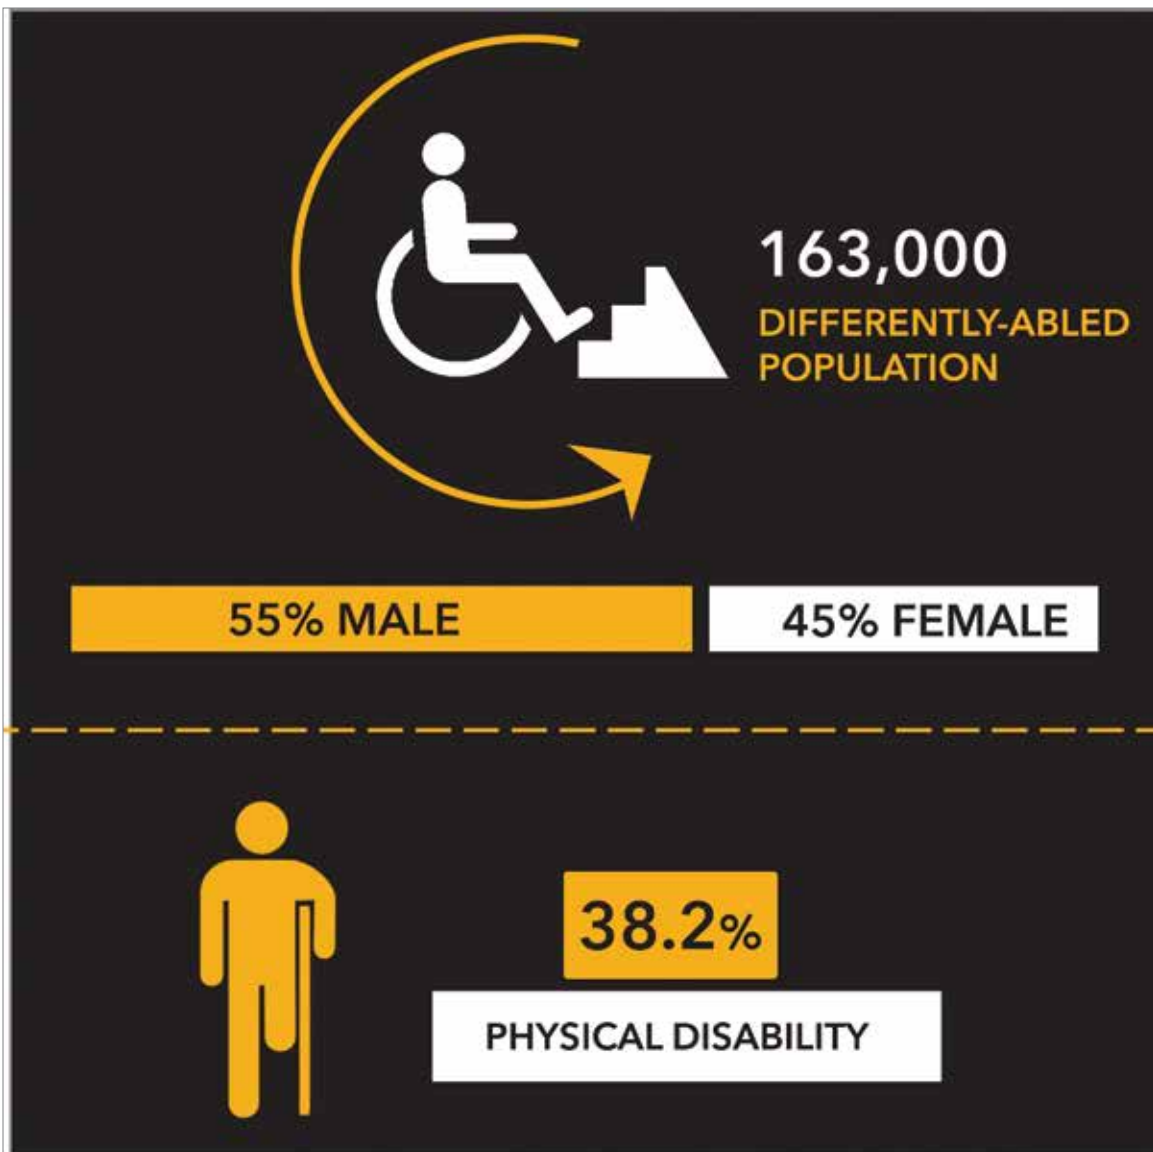

POPULATION ABROAD

Nearly 1400 thousand youth were found to have been abroad for employment, which is nearly 72% of the total absentee population (1,921,494) of Nepal in 2011. Out of the youth population going abroad for employment, 93.2% are males and 61% are from the age group of 16-25 years.

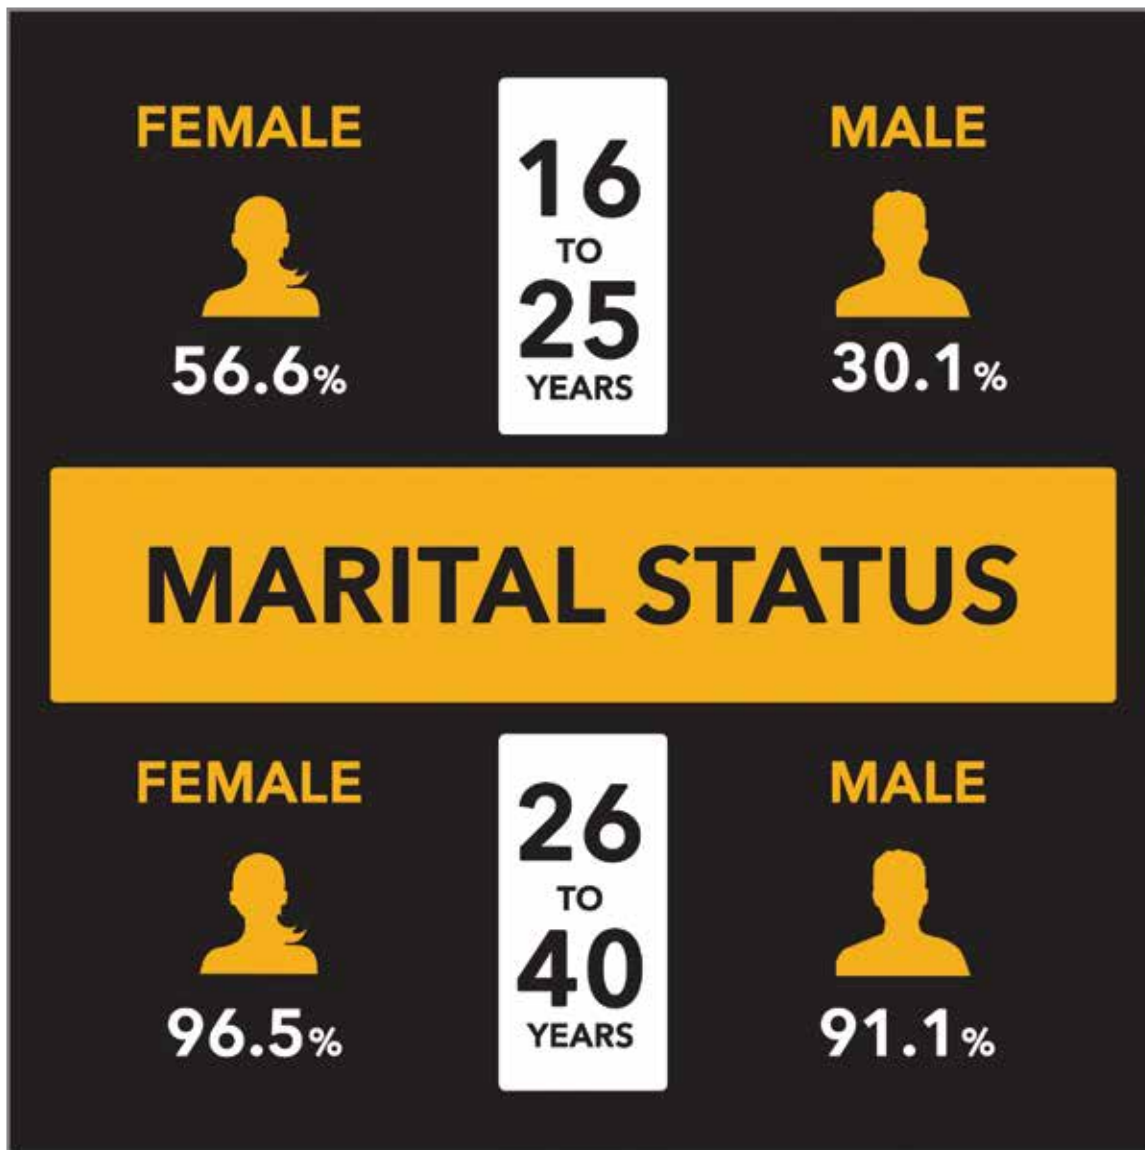

DISABILITY STATUS

The National Population and Housing Census 2011 reported nearly 163 thousand youth population having some kind of disability. Out of them, 55% are males. Among the different types of disability, physical disability alone constitutes nearly 38.2% of the population with disability.

MARITAL STATUS

According to the National Population and Housing Census 2011, the proportion of ever married male and female population aged 16-25 years was found at 30.1% and 56.6% respectively. These figures are 91.1% and 96.5% for males and females of 26-40 years age group.

SINGULATE MEAN AGE AT MARRIAGE

The singulate mean age at marriage is the average length of single life expressed in years among those who marry before age 50. In other words, the singulate mean age at marriage is defined as the mean age at first marriage (of those who eventually get married). Information on marital status was collected for persons aged 10 years and over, and information on age at first marriage was collected for persons who were or had ever been married. The singulate mean age at marriage for males in the country as a whole is 23.8 years. Likewise, the singulate mean age at marriage of females in the country as a whole was 20.6 years.

TOTAL FERTILITY RATE

Total Fertility Rate (TFR) indicates an average number of children born to an ever married woman of reproductive age group 15 to 49 years. It is an overall summary measure of fertility of a woman during the child bearing span of her life. As per the National Population and Housing Census 2011, TFR is 2.5 per woman in Nepal. District-wise TFR has ranged from the highest 5.9 (Kalikot district) to the lowest 1.8 (Kathmandu, Lalitpur, Bhaktapur and Manang districts).

USUAL ACTIVITIES

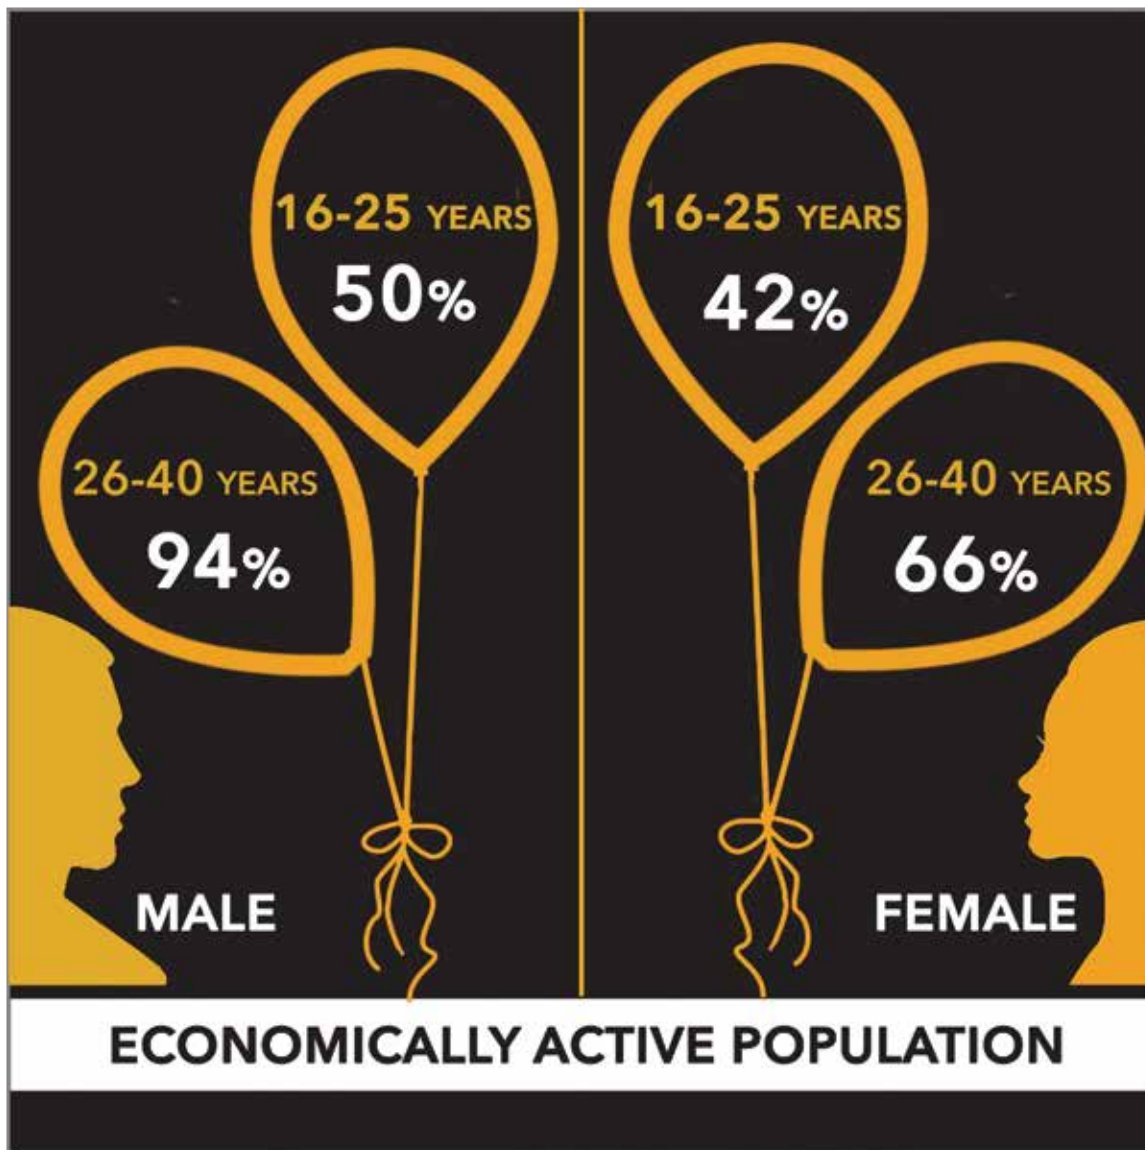

Usual activity is defined as the kind of work carried out by an individual within 12 months prior to the Census. The type of activity was categorized as (i) Own agriculture (ii) Wage/salary (iii) Own non agriculture (iv) Extended economic work (v) Seeking job (vi) Household chores (vii) Study, and (viii) No work. The proportion of male population aged 16-25 and 26-40 years performing their usual activity as the highest one are study (50.06%) and waged/salaried work (37.21%) respectively. Similarly, study (37.53%) and household chores (39.21%) stand as the highest proportion for the female population of age groups 16-25 and 26-40 years respectively.

ECONOMICALLY ACTIVE POPULATION (EAP)

For the Census purpose, the population belongs to an economically active if they did economic work or extended economic work or were seeking economic work at some time during the last 12 months. The economically active population engaged in economic or extended economic work or seeking economic work for at least six months is regarded as usually active population. Employed population is the population whose employed (economic work or extended economic work) period is more than unemployed period (seeking job) during the last 12 months prior to the Census.

Nearly, 50% of the total male population aged 16-25 years is economically active whereas for females of the same age group, this figure is around 42%. But in the age group of 26-40 years, the proportion of economically active population is nearly 94% for males and 66% for females.

OCCUPATION

The Census definition of occupation refers to the kind of specific work performed by an individual of usually active population during a year prior to the Census. The occupation categories used in the Census 2011 are: (i) Armed forces (ii) Managers (iii) Professionals (iv) Technicians and associate professional (vi) Office assistants (vii) Service and sale workers (viii) Agriculture, forestry and fishery workers (ix) Craft and related trades workers (x) Plant and machine operators and assemblers, and (x) Elementary occupations.

The highest proportion of youth population belongs to the occupation category of agriculture, forestry and fishery workers. The percentage of male population aged 16-25 and 26-40 years involving in this category is around 40% whereas this figure is 70% for females of both age groups.

STATUS OF EMPLOYMENT

Employment status refers to the status of individual while being involved in work during the last 12 months prior to the Census enumeration. Census 2011 has used four categories of employment status for employed persons. These categories are given as (i) Employer (ii) Employee (iii) Own account worker, and (iv) Unpaid family worker.

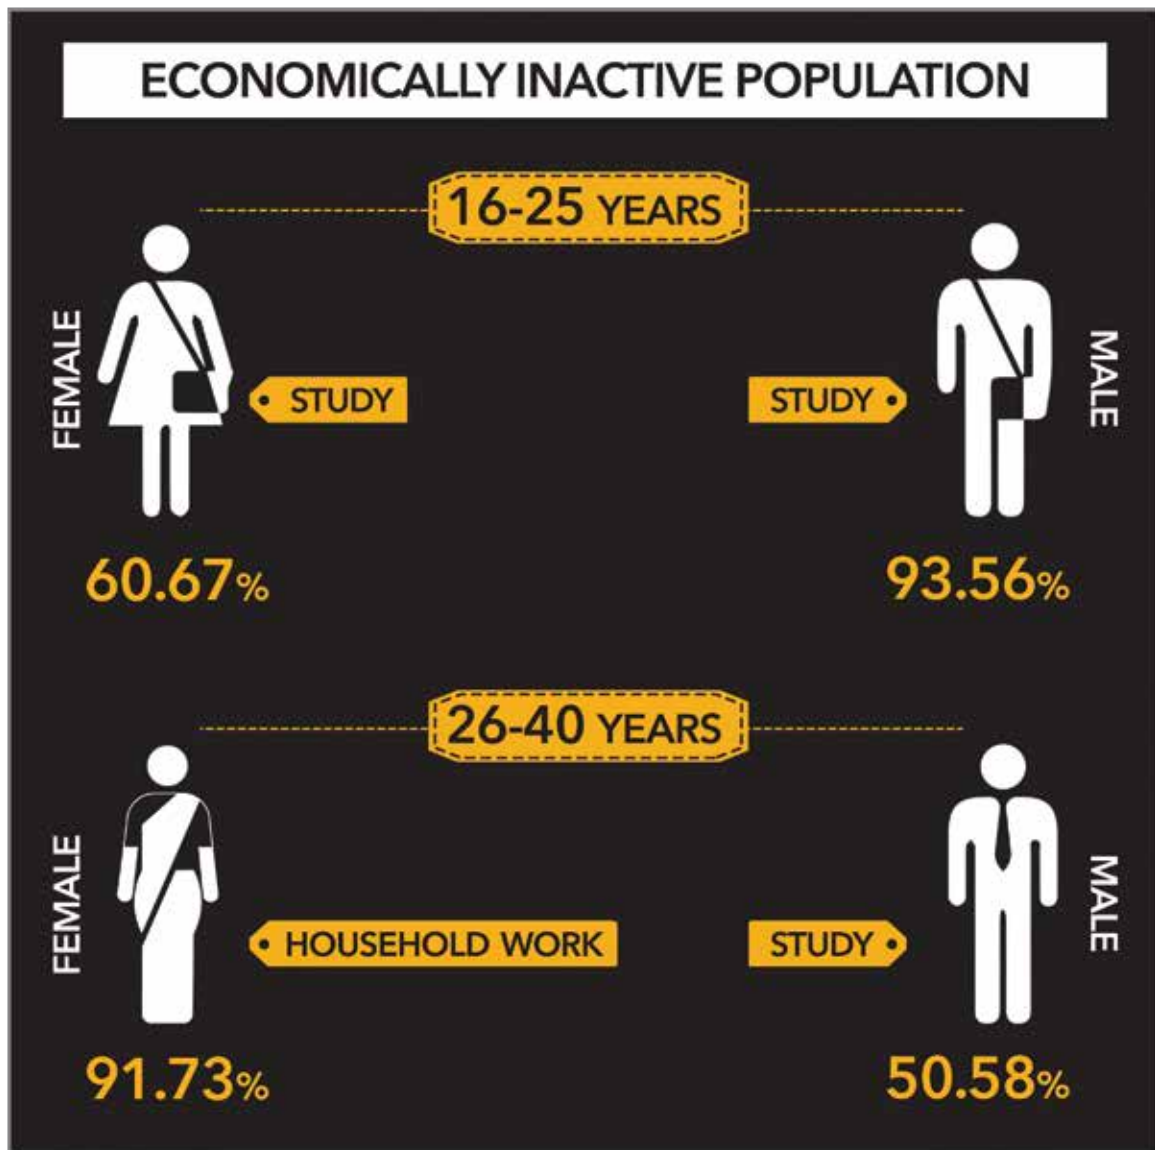

Among male population of age group 16-25 years, more than 40% work as employee and own account worker each, whereas proportion of females in that age category working as employee and own account worker are 18% and 70% respectively. Likewise, the own account workers are 52% and 74% in the male and female population age groups of 26-40 years.

ECONOMICALLY INACTIVE POPULATION

Economically inactive population is the population who did not engage in any economic, extended economic and seeking economic work at all during the last 12 months prior to the Census. National Population and Housing Census 2011 has collected the reasons for not being active and which are given as (i) Study (ii) Household work (iii) Pension/income (iv) Disable (v) Aged (vi) Sickness/chronic illness, and (vi) Others.

Study has been found as the major reason for not being active in male and female of age group 16-25 years (93.56% and 60.67% respectively) and male of 26-40 years (50.58%) but for the female of age group 26-40 years, the major reason for not being active is household work (91.73%).

ACCESS TO INFORMATION TECHNOLOGY

Out of the total households (5,423,297) in the country, only 3% (180,746) and 7% (395,034) households have facility of internet and computer respectively. Nearly 65% (3,504,929) households have access to mobile phone.

KEY VARIABLE-WISE DISTRIBUTION OF YOUTH POPULATION

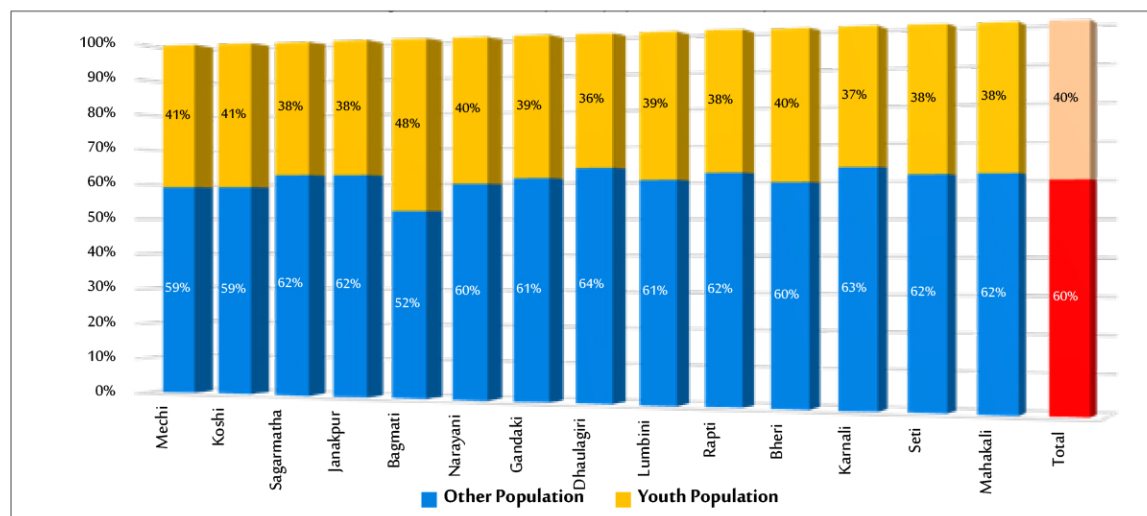

DISTRIBUTION OF TOTAL AND YOUTH POPULATION

The National Population and Housing Census 2011 shows that Bagmati zone has the highest total population (15%) whereas Karnali zone has the lowest total population (1%). Likewise, youth population is highest (48%) in Bagmati zone and lowest (36%) in Dhaulagiri zone.

Table 1: Zone-wise total and youth population

Zone	Total Population	Total Population (%)	Youth Population			Other Population (%)	Youth Population (%)
			Male	Female	Total		
Mechi	1,422,182	5	254,082	327,035	581,117	59	41

Figure 4: Ecological belt-wise youth population, per development region

SEX RATIO OF YOUTH POPULATION

Sex ratio is the number of males per 100 female population.

The National Population and Housing Census 2011 shows that the country's sex ratio is 82 males per 100 females. The sex ratio is highest in Karnali zone (99 males per 100 females) and lowest in Lumbini zone (69 male per 100 females).

Table 5: Zone-wise sex ratio

Zone	Sex Ratio	Zone	Sex Ratio
Mechi	78	Dhaulagiri	75
Koshi	78	Lumbini	69
Sagarmatha	79	Rapti	70

LITERACY STATUS OF YOUTH POPULATION

The National Population and Housing Census 2011 shows that Gandaki zone (88%) has the highest total literate youth population. It also has the highest literate male youth population (94%) and highest literate female youth population (84%). Likewise, Janakpur zone (51%) and Karnali zone (51%) have the lowest total literate youth population.

In 16-25 years age group, the highest literate youth population is in Gandaki zone (95%), which includes 97% literate male youth population and 94% literate female youth population. Janakpur zone (64%) and Karnali zone (64%) have the lowest literate youth population in 16-25 years age group.

In 26-40 years age group, Gandaki zone (80%) has the highest literate youth population including 90% literate male youth population and 74% literate female youth population. Likewise, Karnali zone (39%) has the lowest literate youth population which includes 63% literate male youth population and 15% literate female youth population.

Figure 9: Zone-wise youth literacy rate

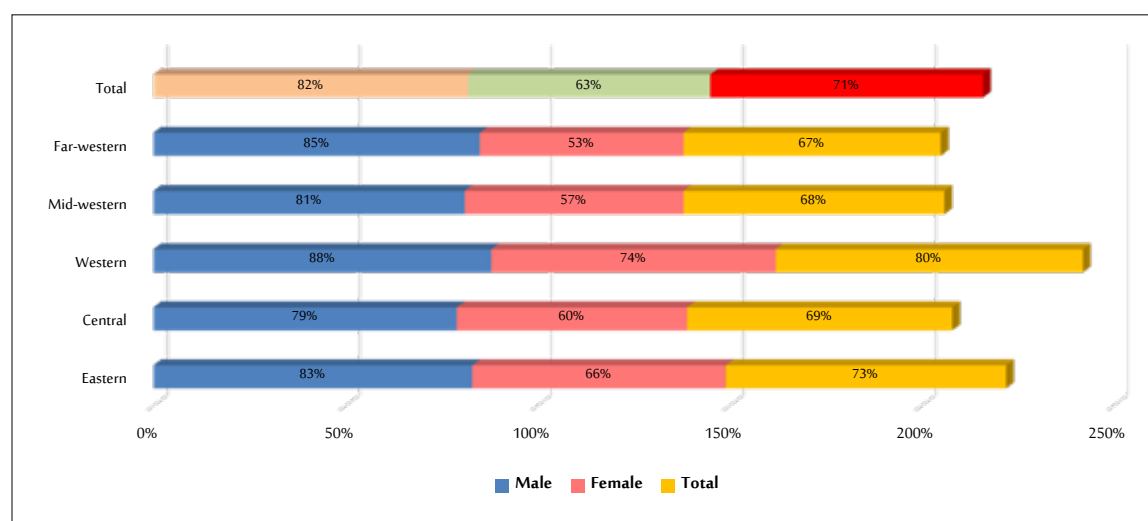

Western Development Region (80%) has the highest total literate youth population, which includes 88% male and 74% female. The lowest total literate youth population is in Far-western Development Region (67%). However, the lowest total literate male and female youth population is in Central Development Region (79%) and Far-western Development Region (53%) respectively.

Table 11: Development region-wise youth population (16-40 years) and literacy rate

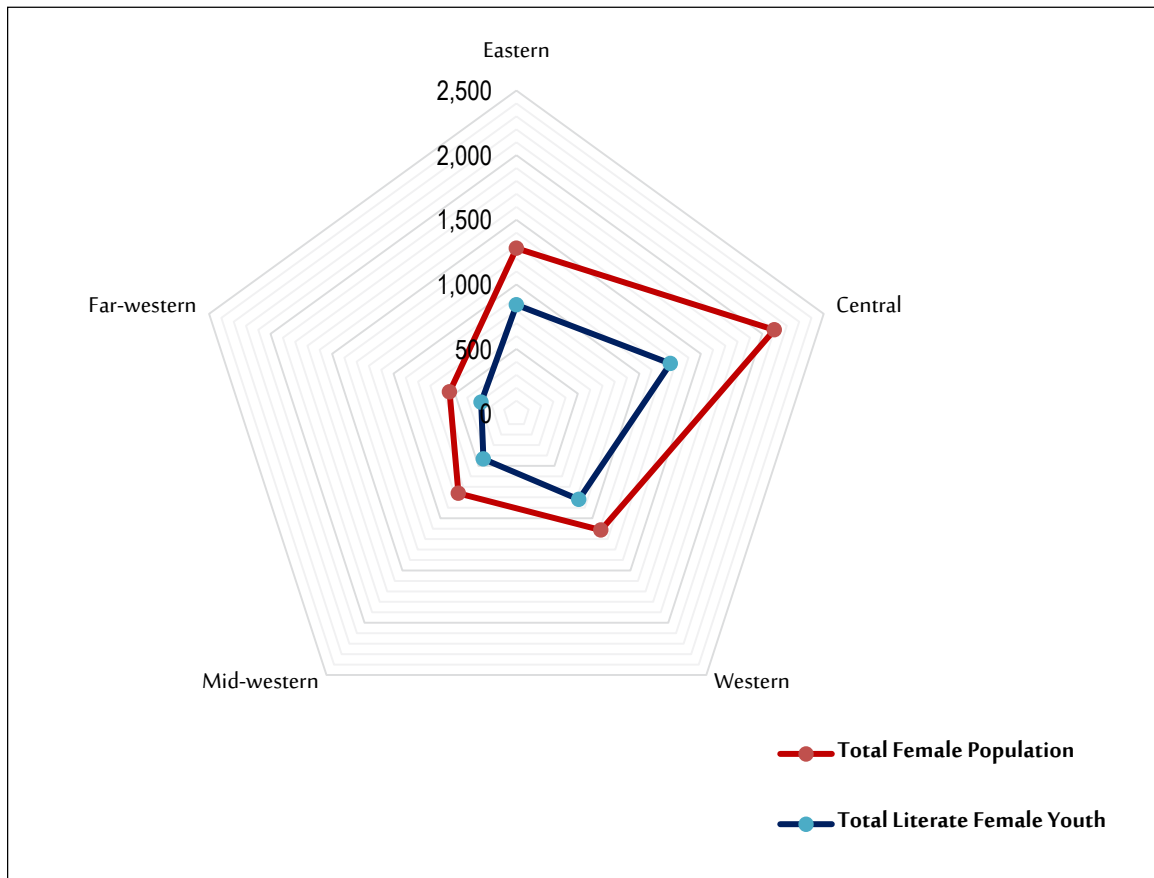

Development Region	Youth Population			Literate Youth			Literate Youth (%)		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Eastern	1,028,108	1,279,674	2,307,782	850,612	841,979	1,692,591	83	66	73
Central	2,004,465	2,099,570	4,104,035	1,581,617	1,252,742	2,834,359	79	60	69
Western	804,559	1,113,335	1,917,894	704,444	821,085	1,525,529	88	74	80
Mid-western	616,953	762,290	1,379,243	499,587	433,448	933,035	81	57	68
Far-western	436,799	544,089	980,888	370,312	286,237	656,549	85	53	67
Total	4,890,884	5,798,958	10,689,842	4,006,572	3,635,491	7,642,063	82	63	71

Figure 10: Development region-wise youth literacy rate

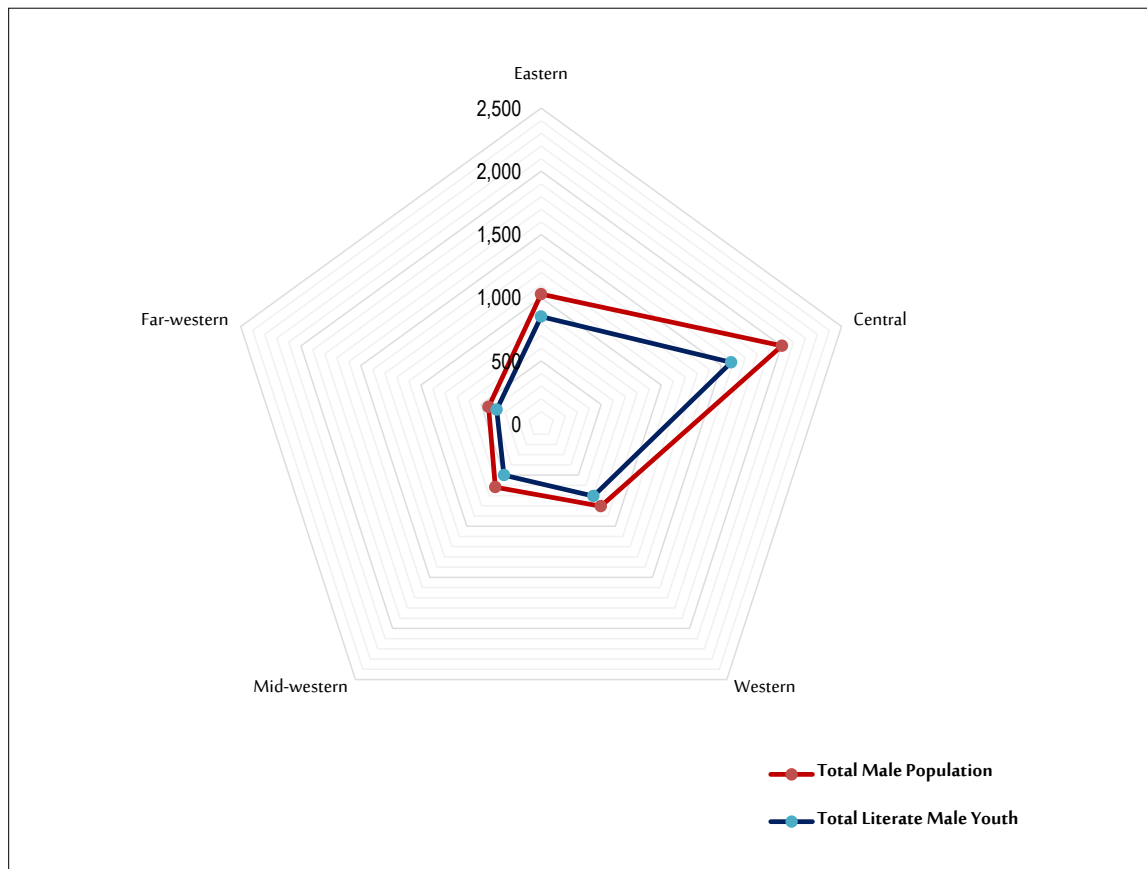

The spider graph shows that the proportion of literate female youth in total female youth population is highest in Western Development Region as compared to other development regions. Likewise, Central Development Region proportionately has the least literate female youth population out of its total female population.

Figure 11: Development region-wise status of female youth literacy (population in '000)

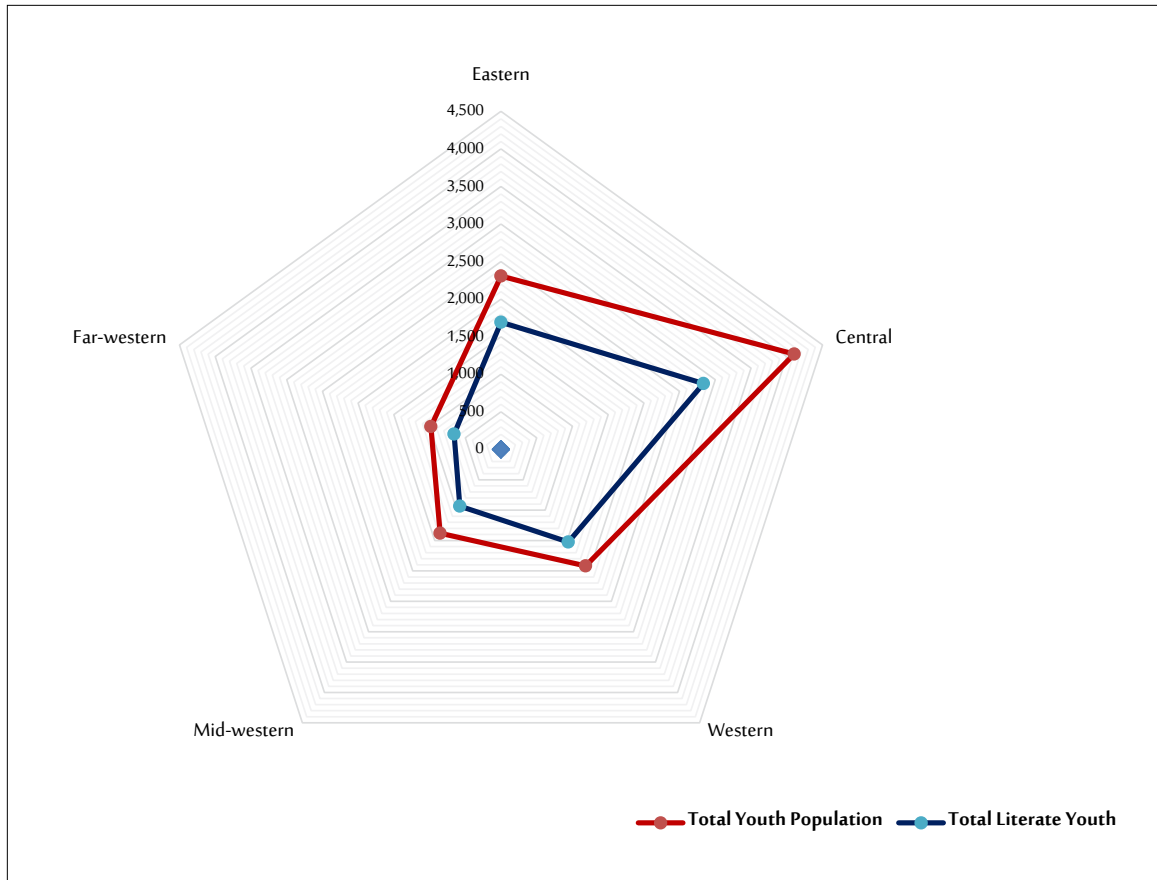

The spider graph shows that the proportion of literate male youth in total male youth population is highest in Western Development Region where as it is lowest in Central Development Region.

Figure 12: Development region-wise status of male youth literacy (population in '000)

There is the highest total literate youth population in Western Development region where as it is lowest in Far-western Development Region.

Figure 13: Development region-wise status of total youth literacy (population in '000)

In terms of the ecological belt, the highest literate youth population is in Hills (81%) and lowest in Terai (64%). Likewise, 90% male and 73% female youth population in Hills are literate, which is the highest among the three ecological belts. The lowest male and female literacy rate is in Terai, which is 75% and 54% respectively.

Table 12: Ecological belt-wise youth population and literacy rate

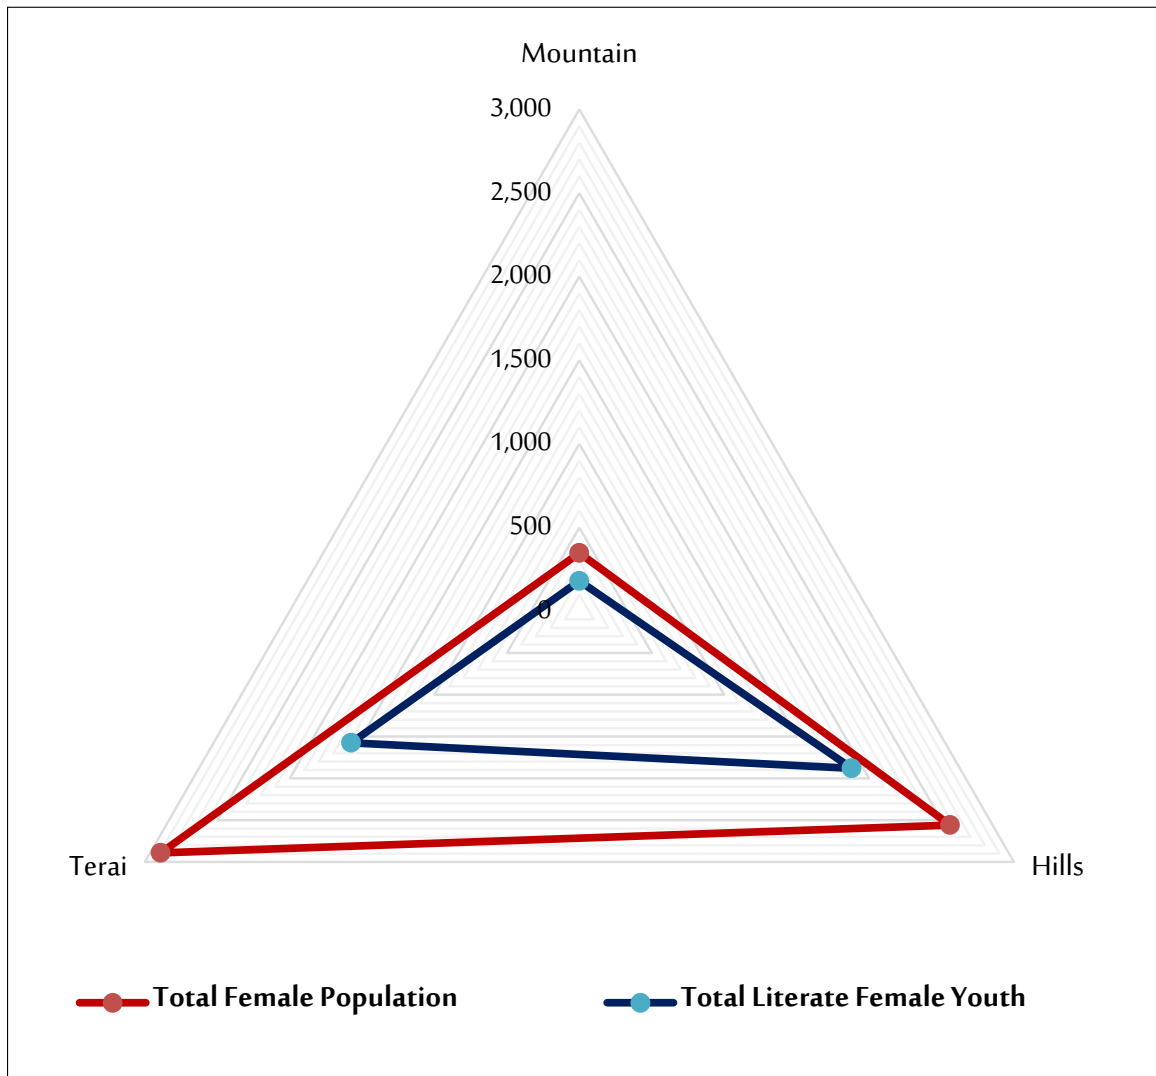

Ecological Belt	Youth Population			Literate Youth			Literate Youth (%)		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Mountain	294,419	347,546	641,965	238,909	179,786	418,695	81	52	65
Hills	2,074,222	2,559,987	4,634,209	1,867,997	1,880,405	3,748,402	90	73	81
Terai	2,522,243	2,891,425	5,413,668	1,899,666	1,575,300	3,474,966	75	54	64
Total	4,890,884	5,798,958	10,689,842	4,006,572	3,635,491	7,642,063	82	63	71

Figure 14: Ecological belt-wise youth literacy rate

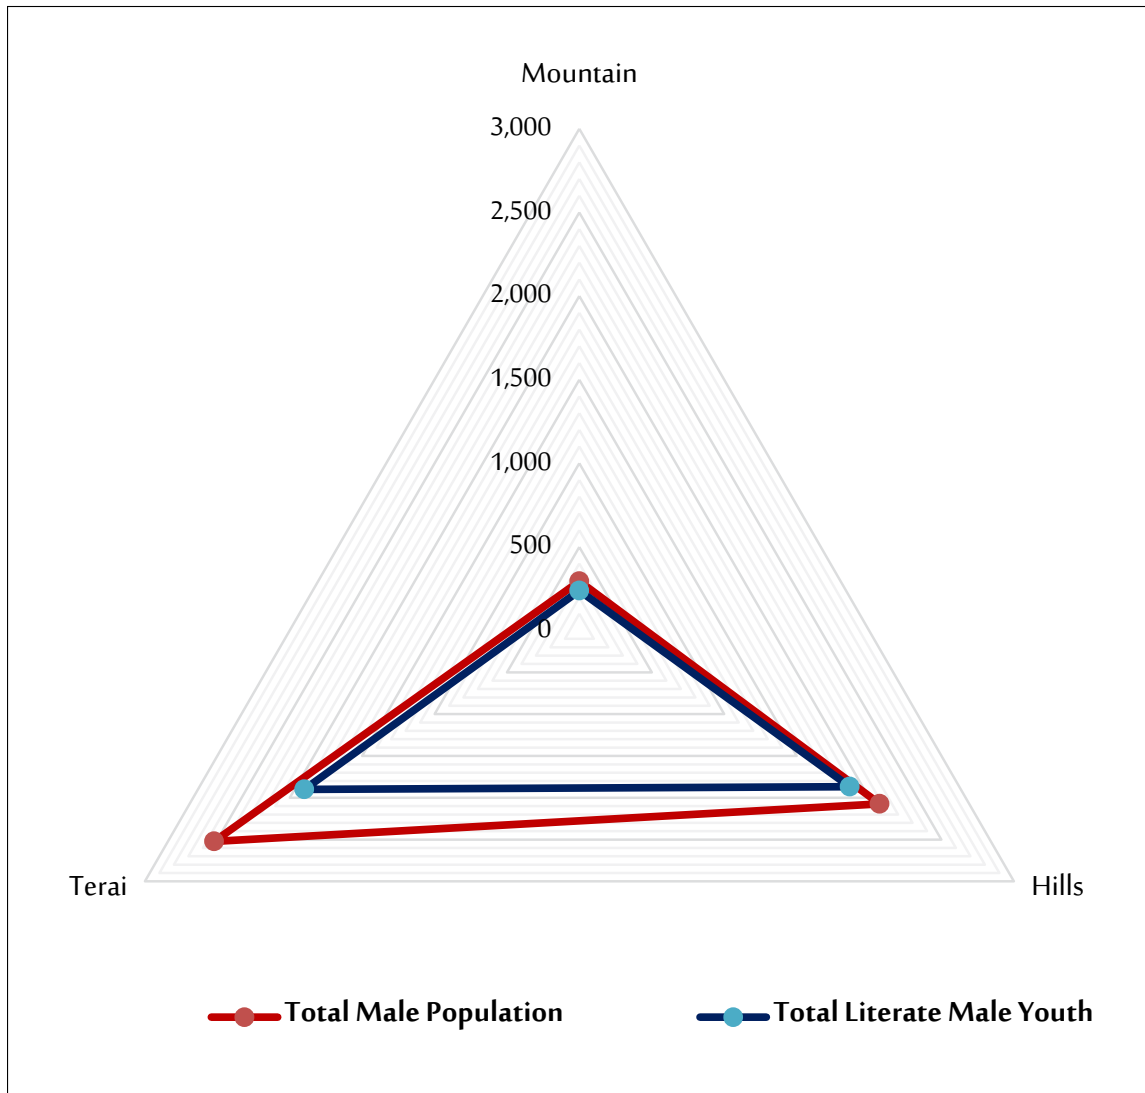

The spider graph shows that the proportion of literate female youth in total female youth population is highest in Hills as compared to other ecological belts. Likewise, proportionately, Terai has the least literate female youth population out of its total female population.

Figure 15: Ecological belt-wise status of female youth literacy (population in '000)

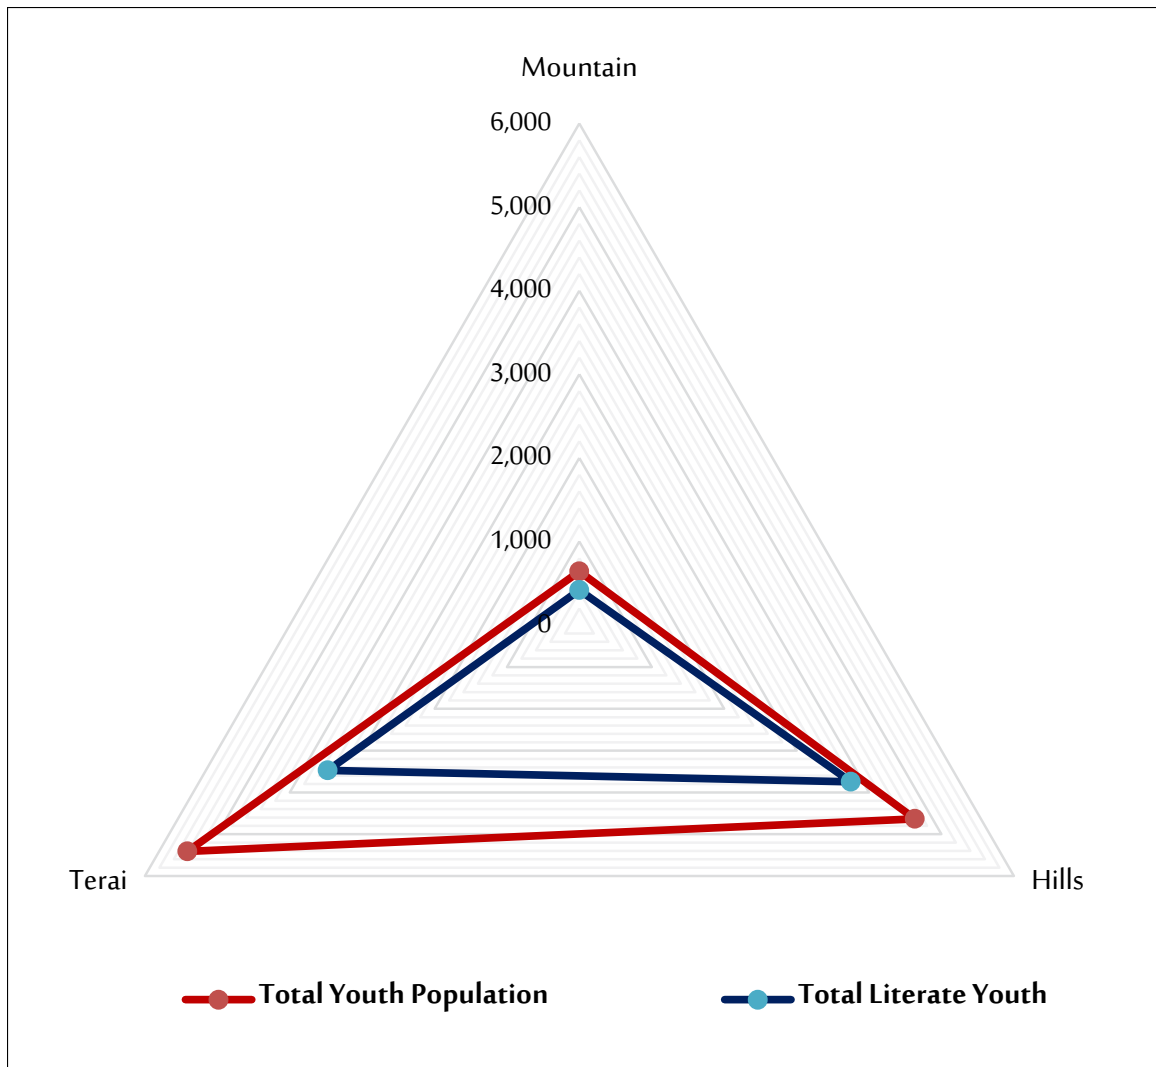

As seen in the spider graph below, the proportion of literate male youth in total male youth population is more in Mountain area whereas it is the least in Terai.

Figure 16: Ecological belt-wise status of male youth literacy (population in '000)

The spider graph below shows that there is the highest total literate youth population in Mountain area where as it is lowest in Terai.

Figure 17: Ecological belt-wise status of total youth literacy (population in '000)

In terms of development region-wise ecological belt, Western Hills (87%) has the highest total literate youth population, which includes 93% literate male and 83% literate female youth population. Likewise, the total literate youth population is lowest in Mid-western Mountain (51%). Gender-wise, Central Terai (65%) has the lowest literate male youth population whereas Mid-western Mountain (31%) has the lowest literate female youth population.

Table 13: Ecological belt-wise youth population and literacy rate, per development region

Figure 18: Ecological belt-wise youth literacy rate, per development region

DISTRIBUTION OF YOUTH POPULATION BY THEIR EDUCATIONAL ATTAINMENT

The National Population and Housing Census 2011 shows that about 20% of the male youth population in 16-25 years age group have attained lower secondary level education and 19% have attained SLC or equivalent. From this age group, the highest number of male youth who have attained graduation and above is in Bagmati zone (8.8%) whereas Karnali zone (1.4%) has the lowest number of such youth population.

Figure 34: Ecological belt-wise total youth population, per development region, by their current school attendance

DISTRIBUTION OF YOUTH POPULATION BEING ABROAD FOR EMPLOYMENT AND EDUCATION

As per the National Population and Housing Census 2011, Dhaulagiri zone (92.8%) has the highest male youth population aged 16-25 years who are abroad for employment whereas Gandaki zone (3.7%) has the highest male population who are abroad for study. Likewise, Mechi zone (3.6%) has the highest female youth population in 16-25 years age group who are abroad for employment and Bagmati zone (3.2%) has the highest female youth population of this age group who are abroad for study. In total male youth population being abroad for employment, 78.2% from Dhaulagiri zone are abroad for employment and 2.6% from Gandaki zone are abroad for study. Similarly, Mechi zone (3.2%) and Bagmati zone (2.1%) has the highest total female youth population who are abroad for employment and study respectively.

Figure 38: Ecological belt-wise youth population, per development region, being abroad for employment and education

DISTRIBUTION OF YOUTH POPULATION WITH DISABILITY STATUS

As per the National Population and Housing Census 2011, Karnali zone (3.37%) has the highest total youth population with disability including 3.86% total male youth and 2.89% total female youth. Likewise, Bagmati zone (0.94%) has the lowest total youth population with disability, which includes 1.04% male youth and 0.84% female youth.

DISTRIBUTION OF YOUTH POPULATION BY MARITAL STATUS

The National Population and Housing Census 2011 shows that 58.3% of the total male youth and 74.3% female youth in Nepal are single married whereas 38.8% of the male youth and 22.9% of the female youth is never married. Among the total youth population of Nepal, 67% are single married and 30.2% are never married.

Karnali zone (65.2%) has the highest population of single married male youth whereas Gandaki zone (47%) has the highest population of never married male youth. Likewise, Janakpur zone (81.2%) has the highest population of single married female youth whereas Mechi zone (29.3%) has the highest population of never married female youth.

Figure 43: Zone-wise single married youth population (in %)

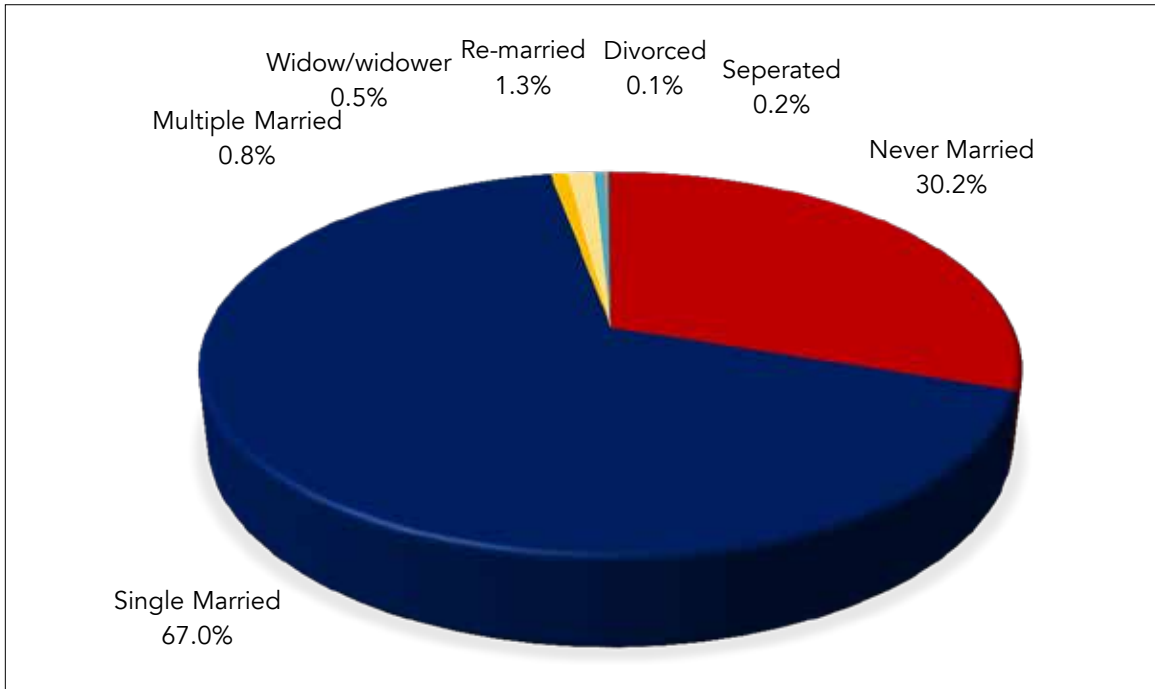

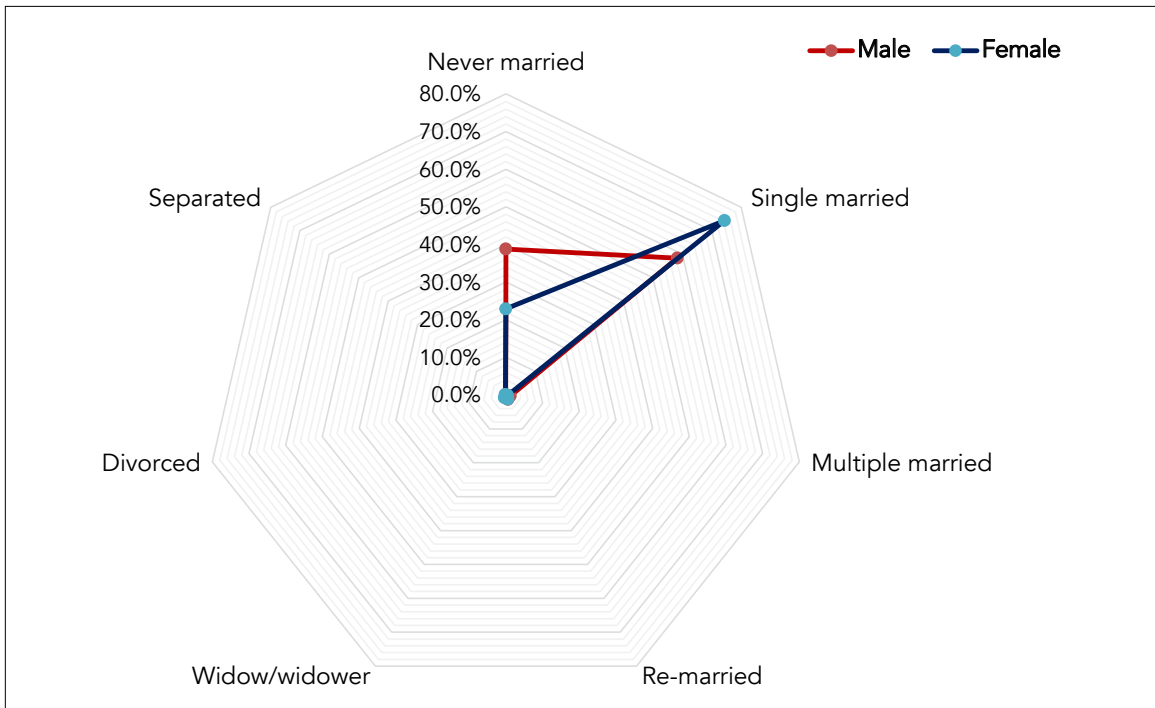

Figure 44: Distribution of youth population by marital status

The spider graph below shows that there is more proportion of the male youth who are never married whereas population of the single married female youth is larger than the single married male youth.

Figure 45: Distribution of youth population by marital status

Comparatively Mid-western and Far-western Development Regions have the highest total single married youth population (69% each) whereas Eastern Development Region has the highest total never married youth population (31.9%).

SINGULATE MEAN AGE AT MARRIAGE (YEARS)

The National Population and Housing Census 2011 shows that the singulate mean age at marriage among male youth is 23.30 years whereas it is 20.44 years among female youth. The male youth from Mechi zone has the highest singulate mean age at marriage 24.88 years whereas it is the lowest in Karnali zone (21.08 years). Likewise, the female youth from Bagmati zone and Mechi zone has the highest singulate mean age at marriage (21.08 years) whereas it is lowest in Karnali (19.18 years).

Table 118: Zone-wise Singulate Mean Age at Marriage (Years)

TOTAL FERTILITY RATE

Total Fertility Rate (TFR) indicates an average number of children born to an ever married woman of reproductive age group 15 to 49 years.

The National Population and Housing Census 2011 shows that total fertility rate is 2.5 per woman in Nepal. Karnali zone (4.6) has the highest TFR whereas Gandaki zone (2.1) has the lowest TFR.

Table 122: Zone-wise Total Fertility Rate

Zone	TFR	Zone	TFR
Mechi	2.4	Dhaulagiri	2.4
Koshi	2.4	Lumbini	2.6
Sagarmatha	2.7	Rapti	3.1

PERCENTAGE DISTRIBUTION OF YOUTH POPULATION BY THEIR USUAL ACTIVITY PERFORMED IN THE LAST 12 MONTHS (PRECEDING THE CENSUS 2011)

According to the National Population and Housing Census 2011, the most usual activity performed by the total youth (male and female) of Nepal include own agricultural activity (26.7%) followed by study (22.7%), household chores (19.4%) and wage/salary earning (18.1%). Likewise, 29.4% of the total male youth are engaged in wage/salary earning activity whereas 26.5% and 24.5% are engaged in study and own agricultural activity respectively. In case of the total female youth, 34.2% usually perform household chores whereas 28.5% are engaged in own agricultural activity and 19.5% study.

In 16-25 years age group, half of the male youth population (50.3%) is engaged in study whereas 20.7% and 15.5% are involved in wage/salary earning activity and own agricultural activity respectively. In the same way, 38% of the female population of this age group study, 27.4% do household chores and 21.3% are engaged in own agricultural activity.

Population of the male youth aged 16-25 years who study is largest in Gandaki zone (59.3%) whereas it is smallest in Narayani zone (41.6%). However, Narayani zone (26.1%) has the largest population of those who are involved in wage/salary earning activity whereas Karnali zone (9.2%) has the smallest. Similarly 30.7% of the male youth of 16-25 years age group from Karnali zone is involved in own agricultural activity whereas Bagmati zone (6.5%) has the smallest number of such male youth. Bagmati zone has the largest population of female youth (48.2%) of this age group who study, whereas Karnali zone (27.1%) has the smallest. In Janakpur zone 45.4% female youth aged 16-25 years are involved in household chores whereas Karnali zone has only 4.9% of such female youth. However, more than half of the female youth of 16-25 years (59.9%) in Karnali zone are involved in own agricultural activity whereas Bagmati zone (12.5%) has the smallest population of such female youth.

Table 126: Zone-wise percentage distribution of male youth population of 16-25 years age group, by their usual activity

Figure 56: Zone-wise percentage distribution of youth population, by no work

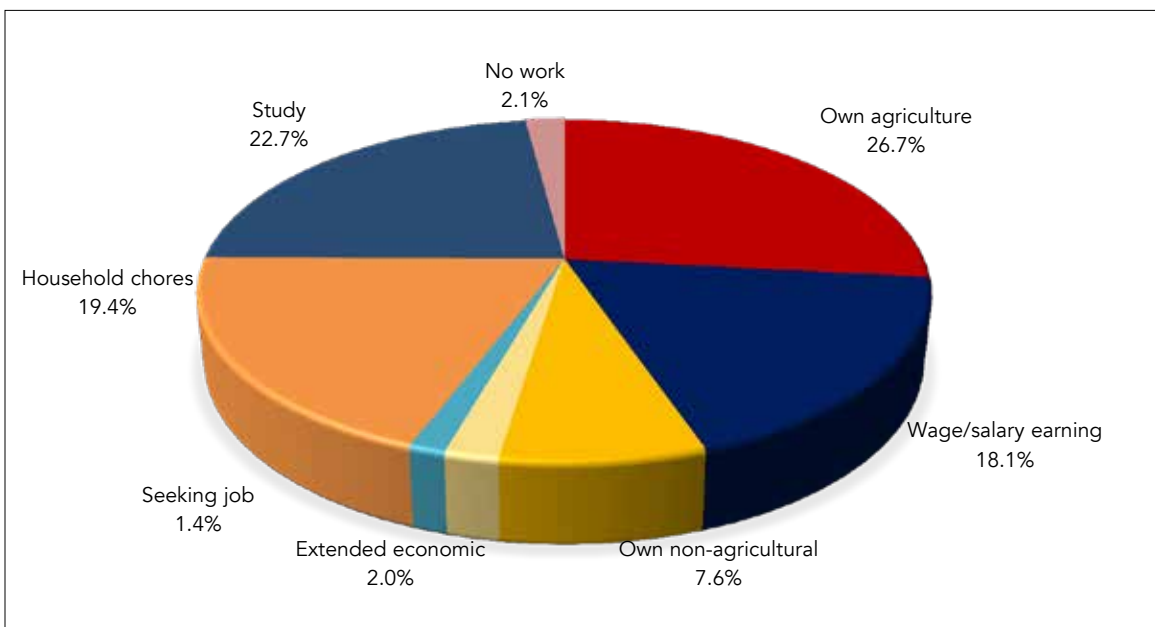

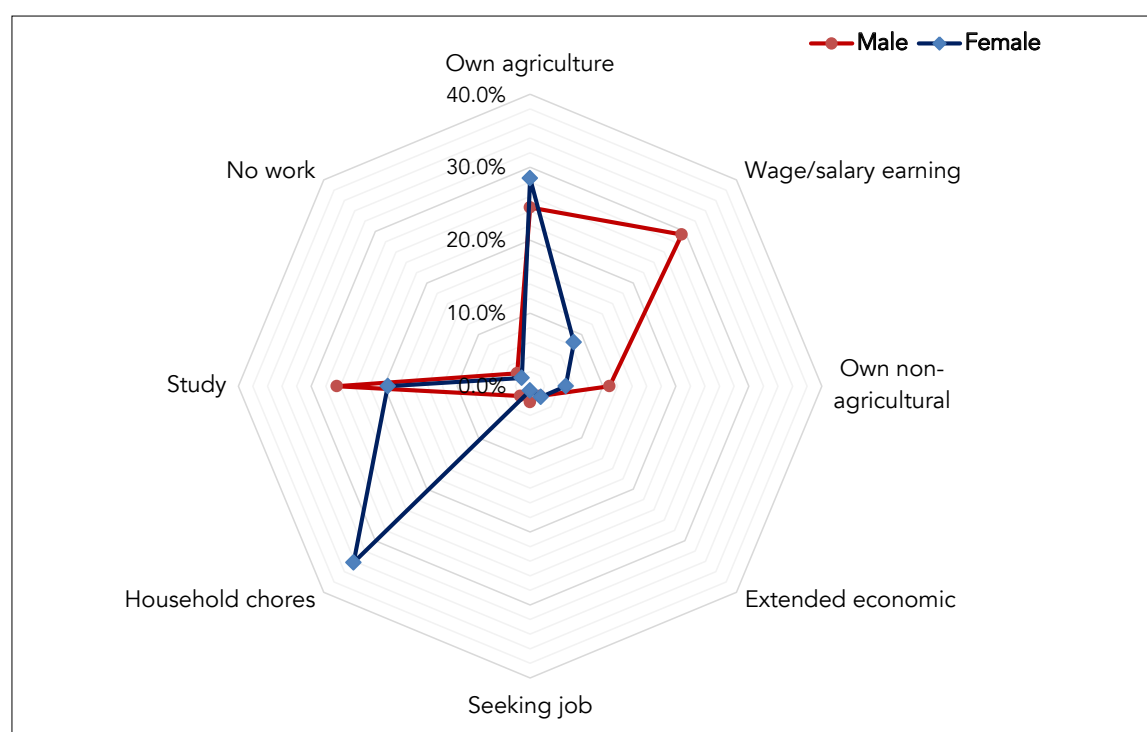

Figure 57: Percentage distribution of youth population by their usual activities

The spider graph below shows that more female youth population of Nepal is engaged in own agricultural activity and household chores whereas more male population is involved in wage/salary earning activity, own non-agricultural activity and study.

Figure 58: Percentage distribution of youth population by their usual activities

36.3% male youth from Mid-western Region are involved in own agricultural activity whereas 33.6% male youth from Central Development Region are engaged in wage/salary earning activity, and 28.8% male youth from Far-western region are involved in study. Almost equal population of female youth from Far-western Development Region (39.9%) and Mid-western Development Region (39.5%) are engaged in own agricultural work whereas 21.8% female youth from Central Development Region are involved in wage/salary earning activity.

Figure 61: Ecological belt-wise percentage distribution of youth population, per development region, by no work

PERCENTAGE DISTRIBUTION OF YOUTH POPULATION BY ECONOMICALLY ACTIVE/NON ECONOMICALLY ACTIVE POPULATION

EAP: Economically Active Population

NEAP: Not Economically Active Population

UAP: Usually Active Population

NUAP: Not Usually Active Population

M = Male

F = Female

T = Total

As per the National Population and Housing Census 2011, more than half (55.4%) youth population and more than one-third (38.4%) youth population are categorized under Usually Active Population (Employment) and Not Economically Active Population respectively. In this regard, there is a huge gap between male and female youth population. More females (47.1%) are found as not economically active as compared to males (27.9%). This shows a ratio of 3 males per 5 females in terms of economically inactive population. Likewise, there is comparatively a huge not economically active population in Janakpur zone (45.1%) and less not economically active population in Karnali zone (20.2%) whereas there is comparatively a high proportion of not economically active population of female youth in Narayani zone (61.9%) and Janakpur zone (61.8%).

Figure 62: Zone-wise percentage distribution of youth population (Not Usually Active Population)

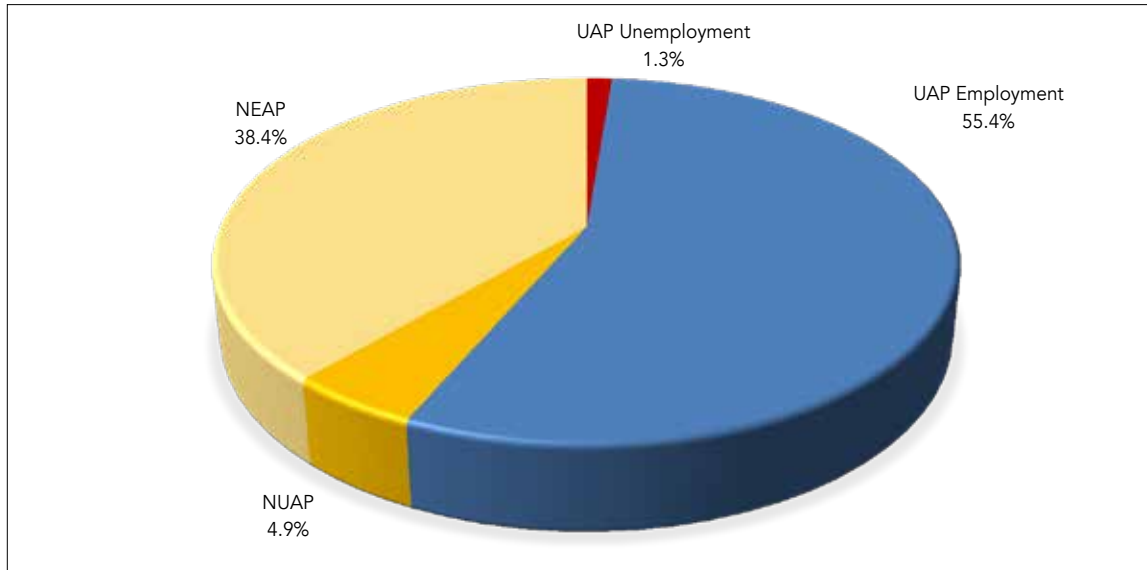

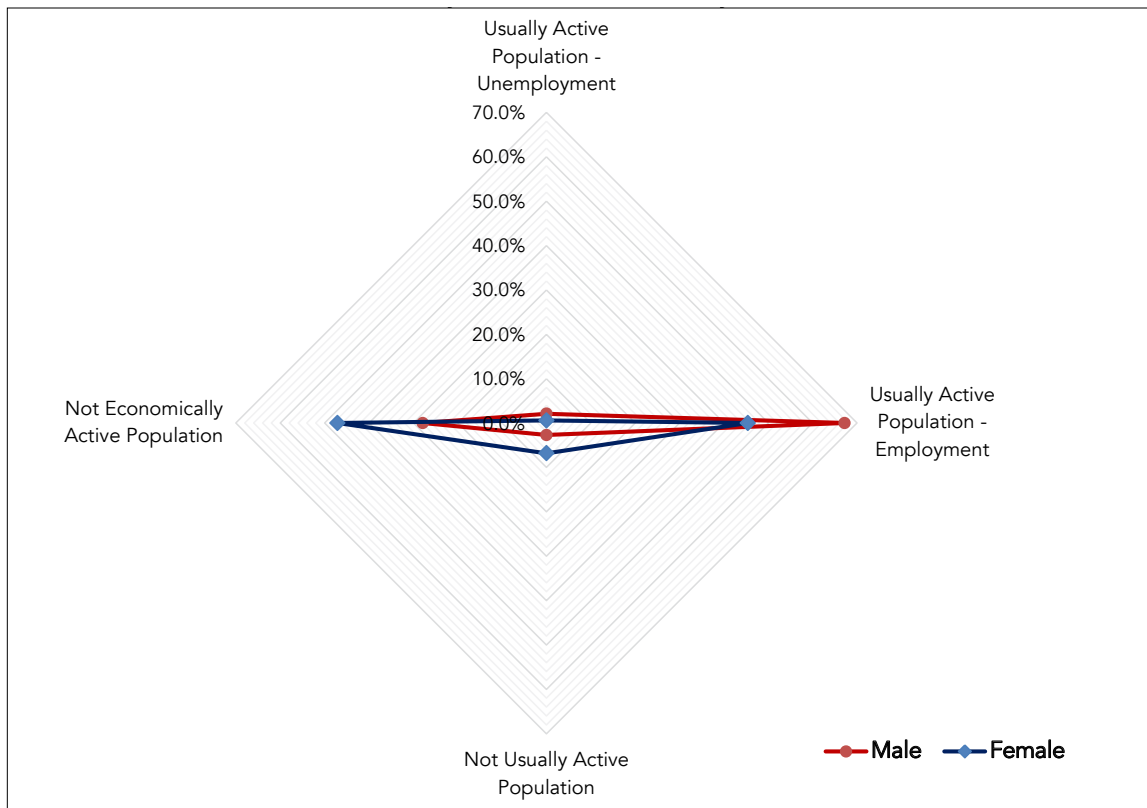

Figure 63: Percentage distribution of youth population (economically active/not economically active)

The spider graph below shows that the proportion of usually active male population (employment) is higher than the female youth whereas the proportion of not usually active as well as not economically active female population is higher than the male population.

Figure 64: Distribution of youth population (economically active/not economically active)

There is a large population of youth from Central Development Region who are not economically active. Moreover, there is also a huge difference between male (57.2%) and female (28.5%) youth population in Central Development Region and comparatively less difference is found in Far-western Development Region (male 28.2% and female 32.4%).

Figure 65: Development region-wise percentage distribution of youth population (Not Usually Active Population)

In terms of the ecological belt, comparatively less youth population from Mountain area is not economically active, but more male youth (22.4%) are not economically active than female youth (20.8%). As compared to Mountain and Hills areas, Terai has a huge population of the youth who are not economically active.

Figure 67: Ecological belt-wise percentage distribution of youth population, per development region (Not Usually Active Population)

PERCENTAGE DISTRIBUTION OF USUALLY ACTIVE POPULATION BY THEIR OCCUPATION

As per the youth population involved in different occupations, more youth are involved in agriculture/forestry/fishery (50.5%), elementary occupations (12%), craft related trades (10%), and service and sale workers (9.9%). The national Census 2011 shows that Karnali zone (80.4%) has more youth who are involved in agriculture/forestry/fishery related works as compared to other zones. There is a less population in Bagmati zone where youth are involved in agriculture/forestry/fishery related works (25%). Likewise, Bagmati zone has a large youth population that is involved in service and sales.

Figure 68: Percentage distribution of youth population by their occupation

The spider graph below shows that there is a huge gap in agriculture/forestry/fishery related works between male and female youth as more females (62%) are involved in this occupation than males (38%).

Figure 69: Percentage distribution of male and female youth population, by their occupation

Far-western Development Region (69.3%) and Mid-western Development Region (67.3%) have a large population of youth who are involved in agriculture/forestry/fishery related works as compared to other development regions. Likewise, it is found that there is more youth population that is engaged as service and sale worker in the Central Development Region (15.3%).

PERCENTAGE DISTRIBUTION OF ECONOMICALLY ACTIVE YOUTH POPULATION BY EMPLOYMENT STATUS

M = Male

F = Female

T = Total

The National Population and Housing Census 2011 shows that more than half youth population (57.7%) is engaged as own account worker, followed by employee (32.5%). In Bagmati zone, more youth population are working as employee, as compared to other zones, whereas Karnali zone is identified as having the least youth population that is engaged as employee (13.1%).

Figure 70: Zone-wise percentage distribution of economically active youth population by employment status (Unpaid Family Worker)

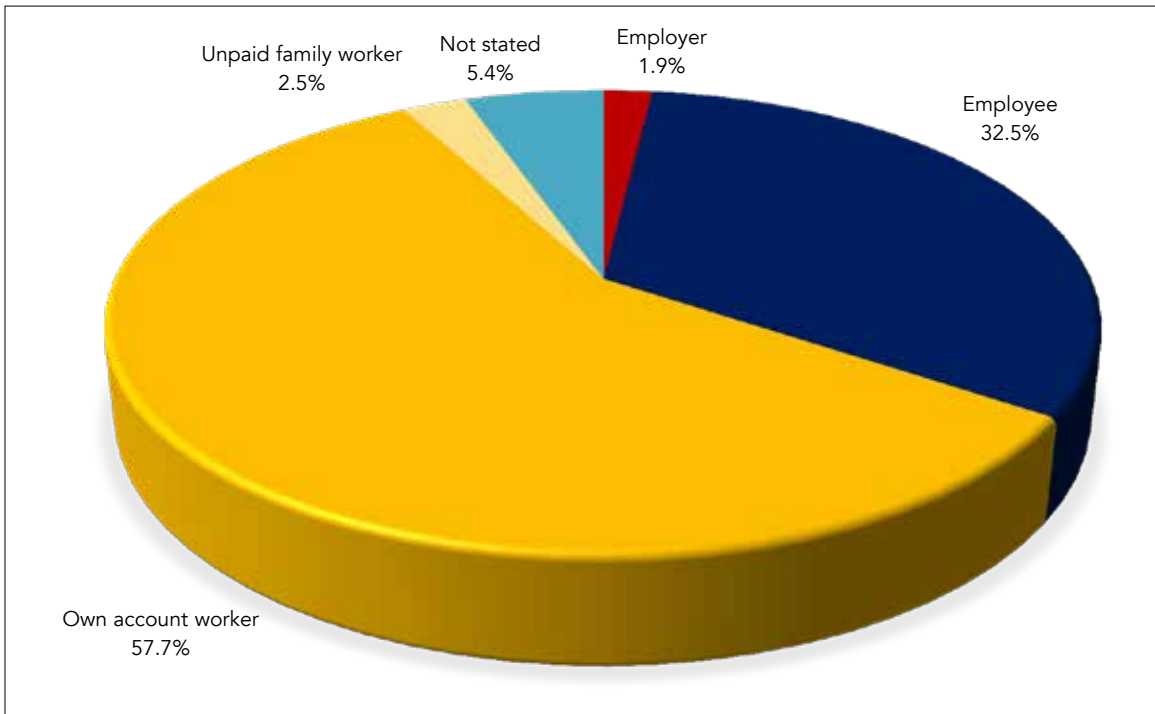

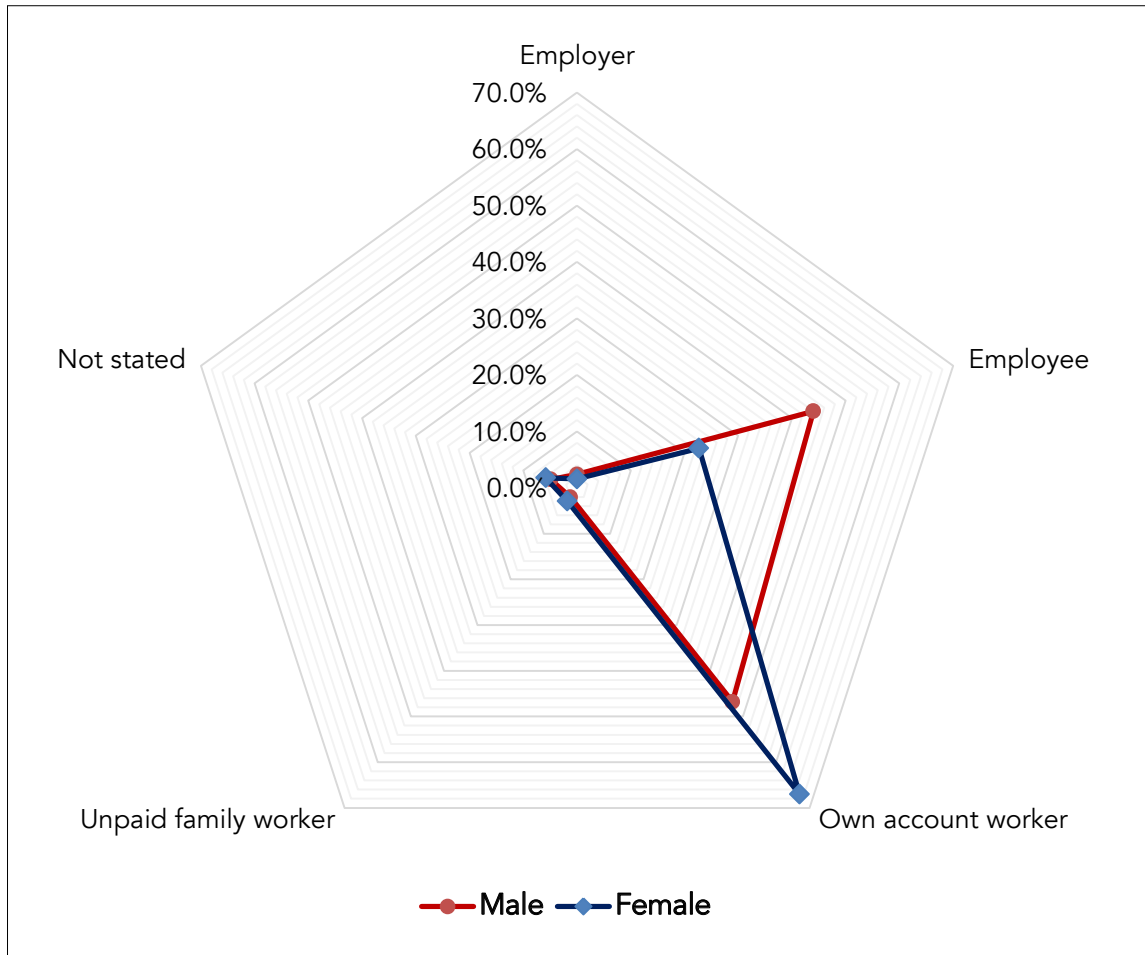

Figure 71: Percentage distribution of economically active youth population, by employment status

The spider graph below shows sex-wise comparison of economically active youth population by their employment status. There is a huge gap between male youth (44%) and female youth (22.7%) who are engaged as employee, which is in the ratio of 1 female per 2 males. Likewise, more female youth are found to have engaged in own account work (67%) than the male youth population (46.8%).

Figure 72: Percentage distribution of economically active youth population, by employment status

Across all development regions, there is a high population of youth that is involved in own account work (59%) as compared to other employment status. Western Development Region (62.7%) has the highest population of youth involved in own account work.

Figure 75: Per development region, ecological belt-wise percentage distribution of economically active youth population by employment status (Unpaid Family Worker)

PERCENTAGE DISTRIBUTION OF NOT ECONOMICALLY ACTIVE YOUTH POPULATION BY MAJOR REASONS FOR NOT BEING ACTIVE

M = Male

F = Female

T = Total

The National Population and Housing Census 2011 shows that study and household work are the major reasons for youth not being economically active. 51.5% and 38.4% youth are inactive due to their engagement in study and household work respectively, followed by disability (3%), sickness (1.6%). In terms of gender, study seems to be the major reason for 71.2% of the male youth population and 34.8% of the female youth population. Likewise, 61.6% of the female youth population is not economically active due to household works as compared to a small portion of the male population (10.8%).

Figure 81: Per development region, ecological belt-wise percentage distribution of not economically active youth population (by sickness and chronic illness)

DISTRIBUTION OF HOUSEHOLDS HAVING FACILITY TO INFORMATION TECHNOLOGY

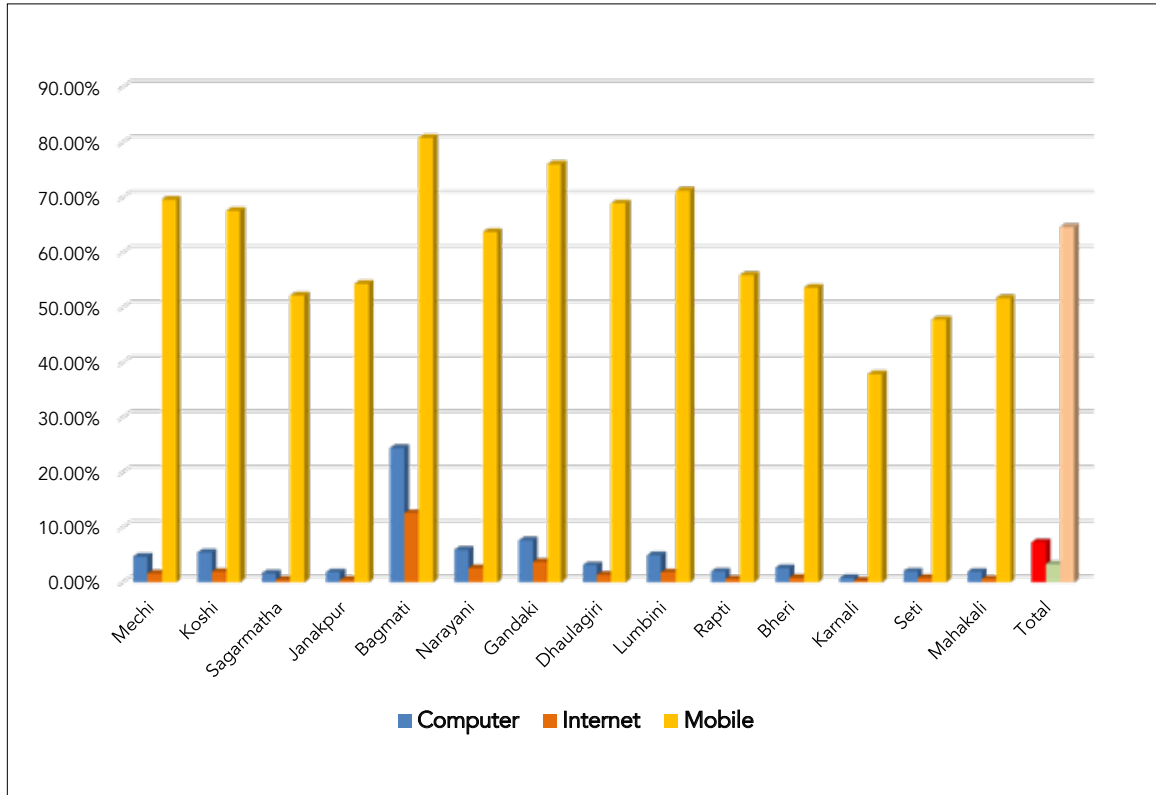

HH = Households

The National Population and Housing Census 2011 shows that only 7.3%, 3.3% and 64.6% households have access to computer, internet and mobile phone respectively. As compared to other zones, households in Karnali zone have less access to such information technology (0.8% in computer, 0.3% in internet, and 37.9% in mobile phone). Likewise, households in Bagmati zone have better access to computer (24.5%), internet (12.6%) and mobile phone (80.8%).

Table 166: Zone-wise distribution of households having facility to information technology (by type of facility)

Zone	Total No. of Households	Computer		Internet		Mobile Phone	
		No. of HH	%	No. of HH	%	No. of HH	%
Mechi	316,508	14,802	4.7	5,049	1.6	220,395	69.6
Koshi	509,857	27,369	5.4	9,922	1.9	344,259	67.5
Sagarmatha	404,378	6,429	1.6	1,499	0.4	210,956	52.2
Janakpur	529,411	9,529	1.8	2,202	0.4	287,290	54.3
Bagmati	903,669	220,983	24.5	114,308	12.6	730,530	80.8
Narayani	529,158	31,333	5.9	13,746	2.6	337,209	63.7
Gandaki	382,555	29,104	7.6	14,068	3.7	290,893	76
Dhaulagiri	128,212	3,925	3.1	1,749	1.4	88,308	68.9
Lumbini	554,832	27,312	4.9	10,085	1.8	395,129	71.2
Rapti	296,159	5,945	2.0	1,728	0.6	165,442	55.9
Bheri	330,053	8,452	2.6	2,832	0.9	177,013	53.6
Karnali	68,802	550	0.8	215	0.3	26,073	37.9
Seti	290,775	5,841	2.0	2,199	0.8	138,934	47.8
Mahakali	178,928	3,460	1.9	1,144	0.6	92,498	51.7
Total	5,423,297	395,034	7.3	180,746	3.3	3,504,929	64.6

Figure 82: Zone-wise distribution of households having facility to information technology (by type of facility)

Comparatively more households in Central Development Region have access to computer (13.3%) and internet (6.6%) whereas households in Western Development Region have better access to mobile phone (72.7%).

Table 167: Development region-wise distribution of households having facility to information technology (by type of facility)

Development Region	Total No. of Households	Computer		Internet		Mobile Phone	
		No. of HH	%	No. of HH	%	No. of HH	%
Eastern	1,230,743	48,600	3.9	16,470	1.3	775,610	63.0
Central	1,962,238	261,845	13.3	130,256	6.6	1,355,029	69.1
Western	1,065,599	60,341	5.7	25,902	2.4	774,330	72.7
Mid-western	695,014	14,947	2.2	4,775	0.7	368,528	53
Far-western	469,703	9,301	2.0	3,343	0.7	231,432	49.3
Total	5,423,297	395,034	7.3	180,746	3.3	3,504,929	64.6

Figure 83: Development region-wise distribution of households having facility to information technology (by type of facility)

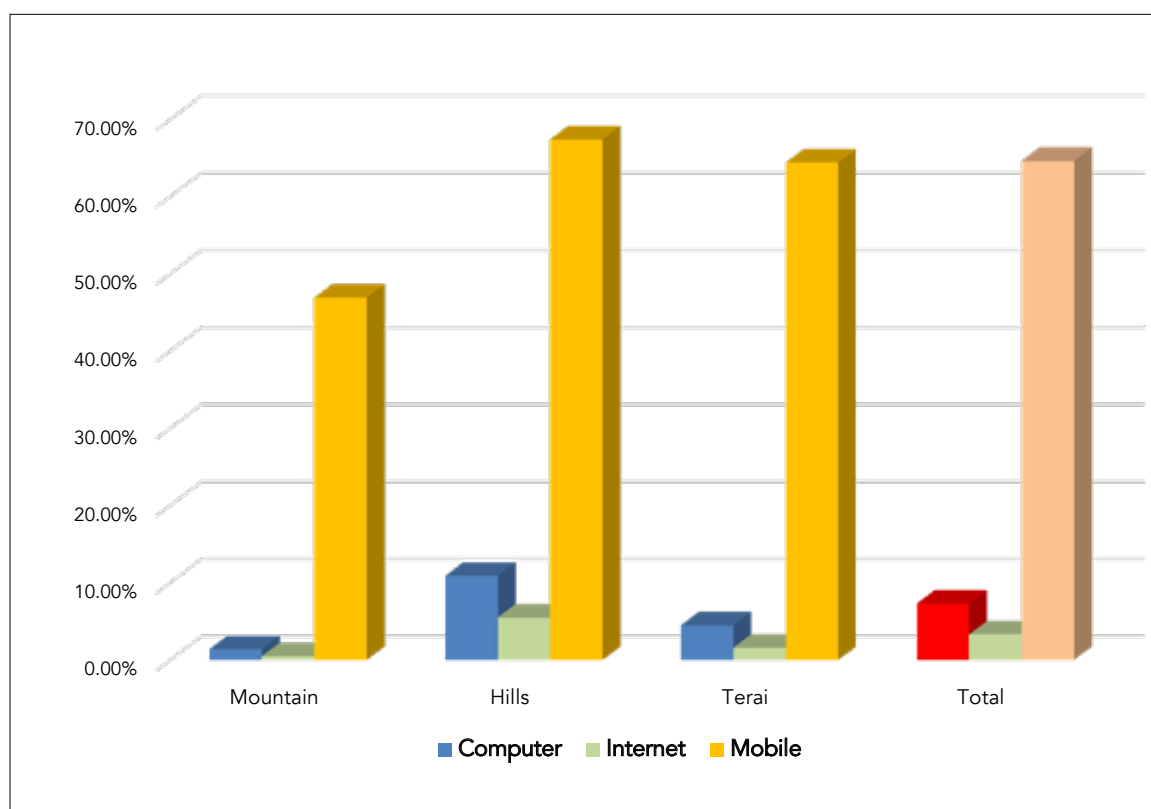

In terms of the ecological belt, Mountain area has less access to information technology compared to Hills and Terai.

Table 168: Ecological belt-wise distribution of households having facility to information technology (by type of facility)

Ecological Belt	Total No. of Households	Computer		Internet		Mobile Phone	
		No. of HH	%	No. of HH	%	No. of HH	%
Mountain	363,698	4,982	1.4	1,747	0.5	170,532	46.9
Hills	2,532,041	275,317	10.9	138,225	5.5	1,707,744	67.4
Terai	2,527,558	114,735	4.5	40,774	1.6	1,626,653	64.4
Total	5,423,297	395,034	7.3	180,746	3.3	3,504,929	64.6

Figure 84: Ecological belt-wise distribution of households having facility to information technology (by type of facility)

In terms of development region-wise ecological belt, Central Hills has comparatively better access to all types of facility of information technology, i.e. computer (22.4%), internet (11.5%), mobile phone (77.9%).

Table 169: Per development region, ecological belt-wise distribution of households having facility to information technology (by type of facility)

Ecological Belt Per Development Region	Total No. of Households	Computer		Internet		Mobile Phone	
		No. of HH	%	No. of HH	%	No. of HH	%

GEOGRAPHICAL INFORMATION SYSTEM (GIS) MAPS

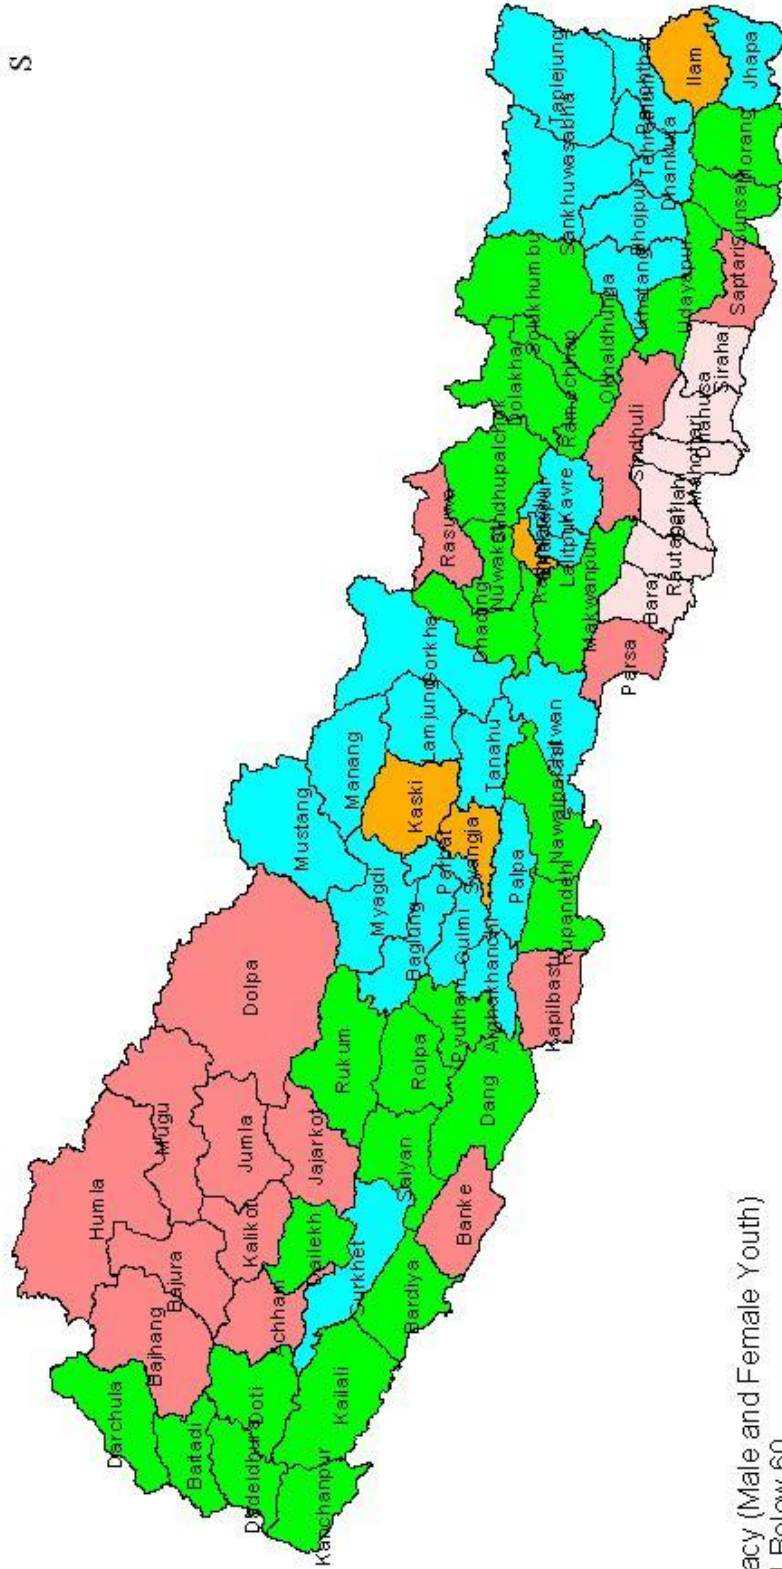

MAP 1: DISTRIBUTION OF YOUTH POPULATION BY BROAD AGE GROUPS (16-25 & 26-40 YEARS) AND BY SEX

MAP 2: LITERACY STATUS OF YOUTH POPULATION (MALE)

MAP 4: LITERACY STATUS OF YOUTH POPULATION
(MALE & FEMALE)

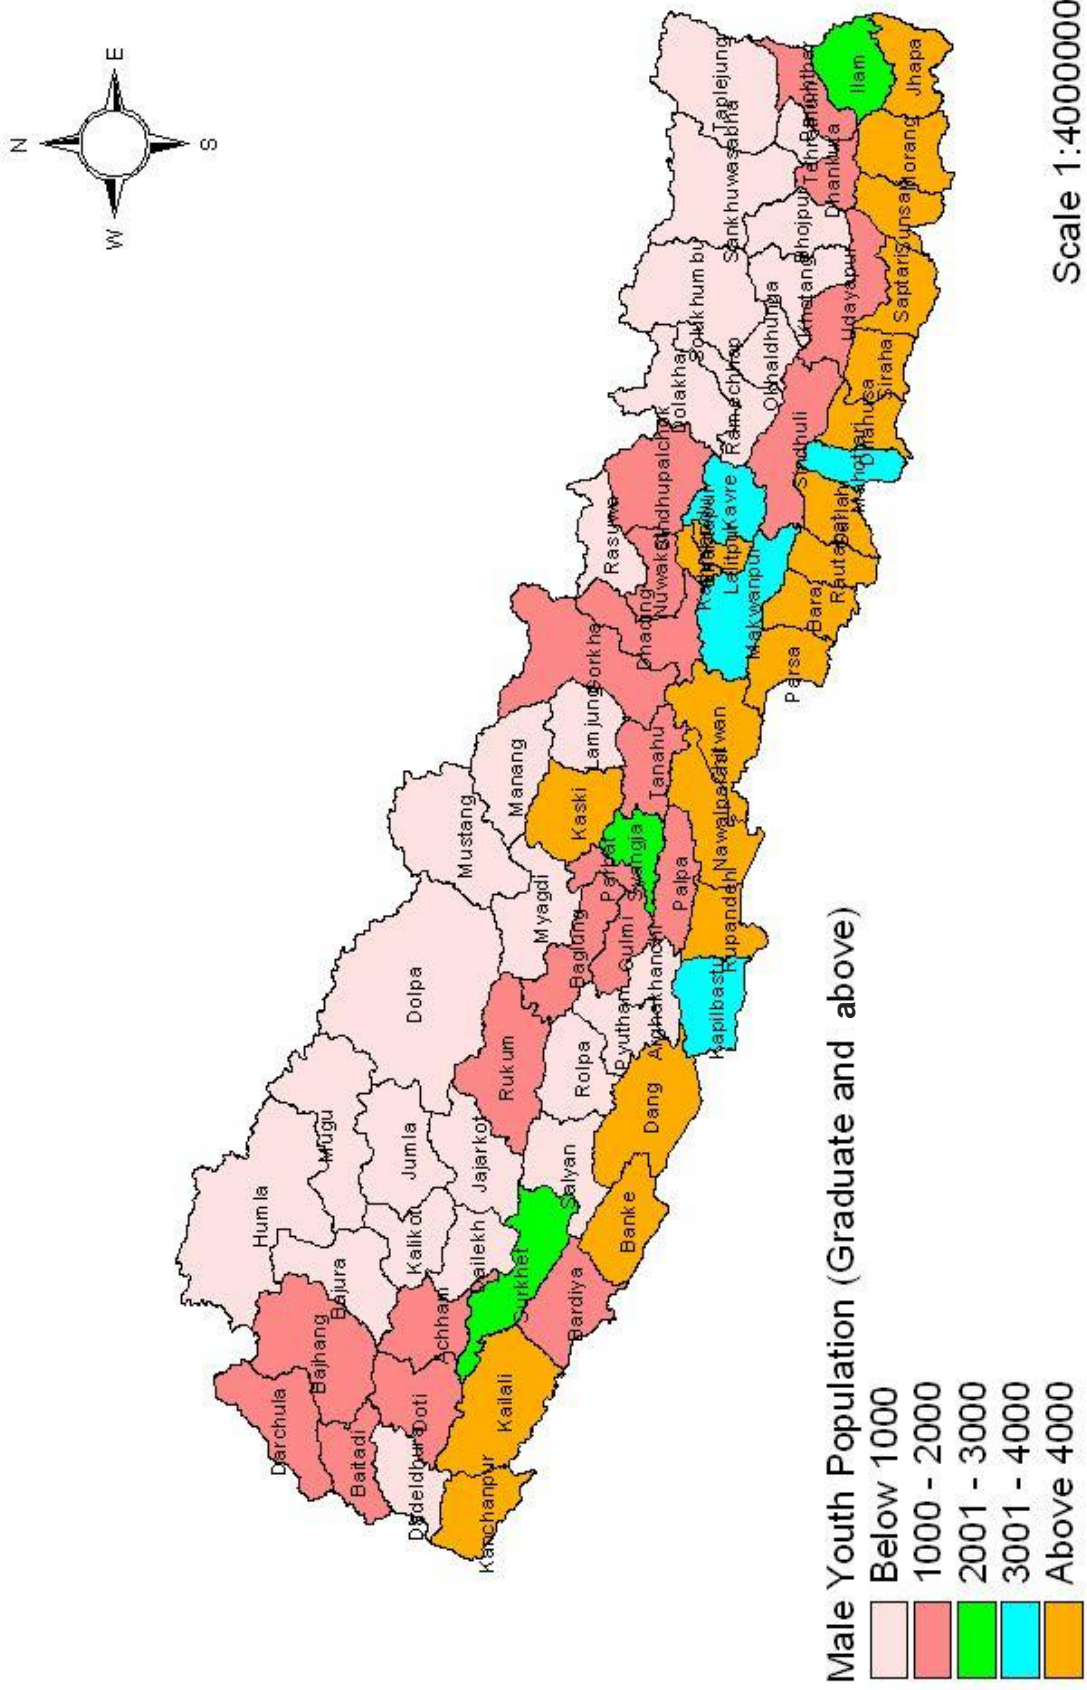

Literacy (Male and Female Youth)

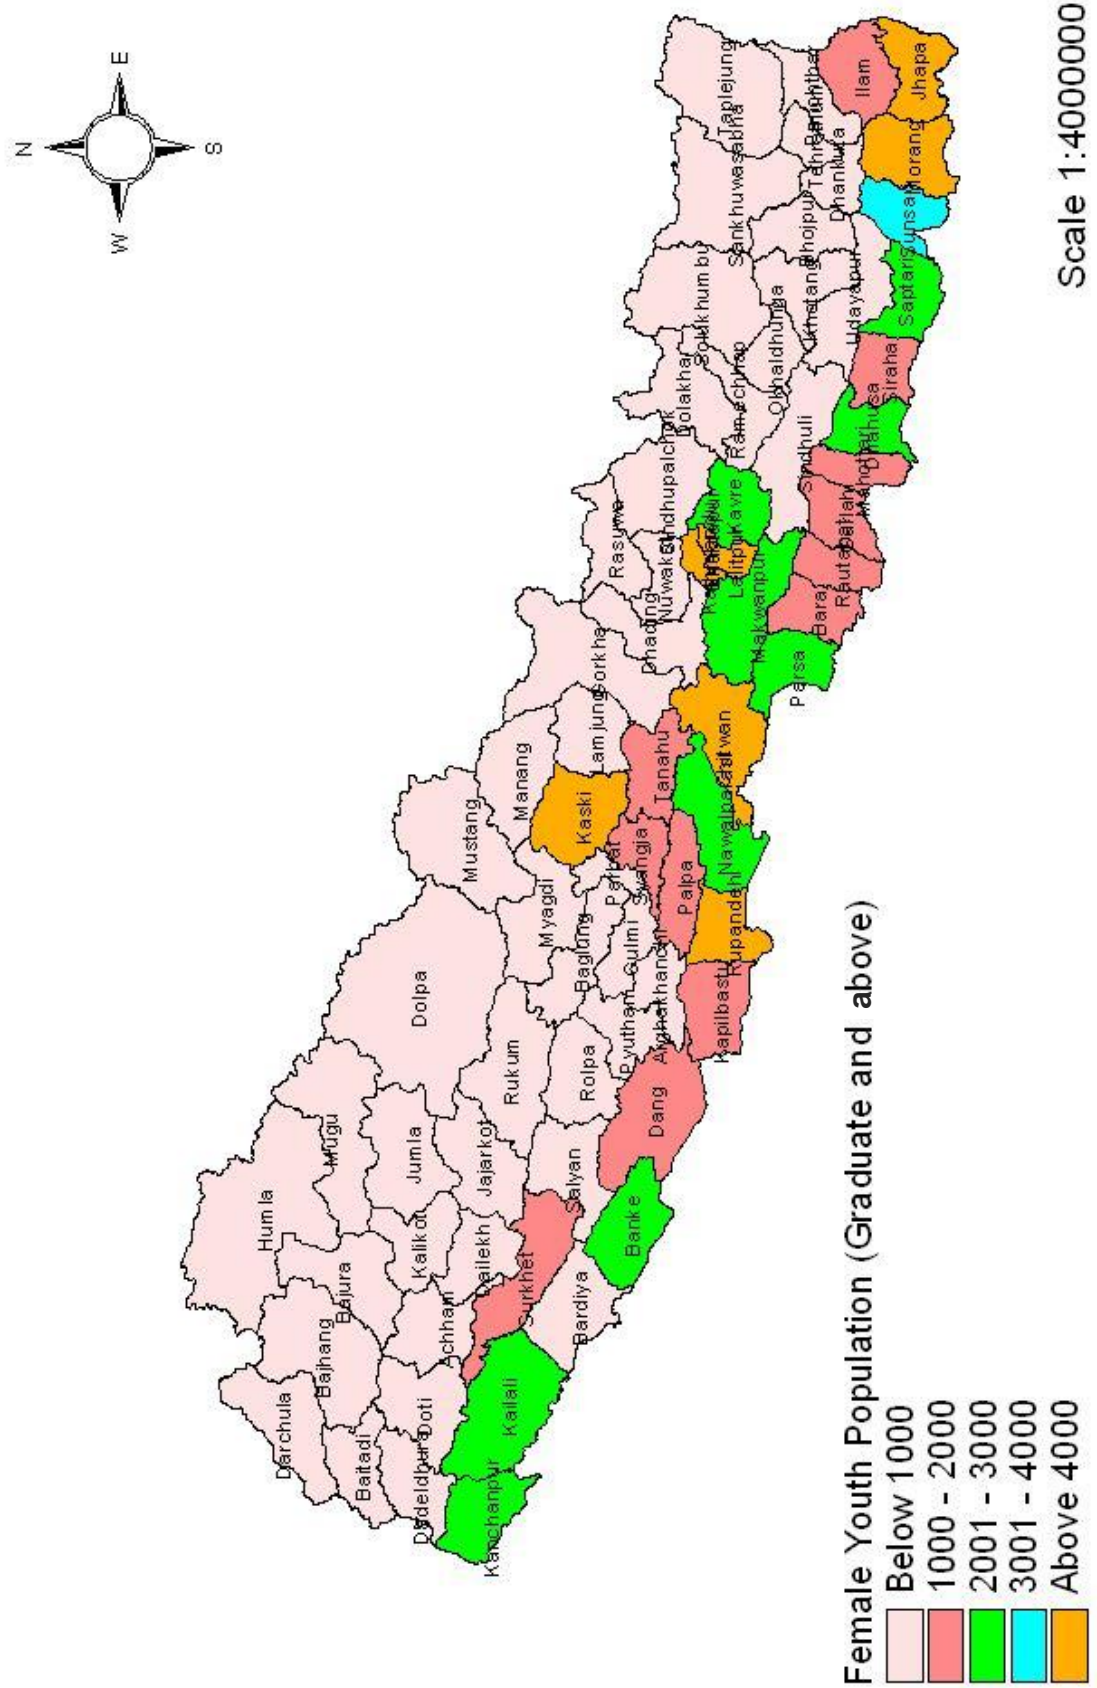

- Below 60
- 60 - 70
- 71 - 80
- 81 - 90
- 91 - 100

Scale 1:4000000

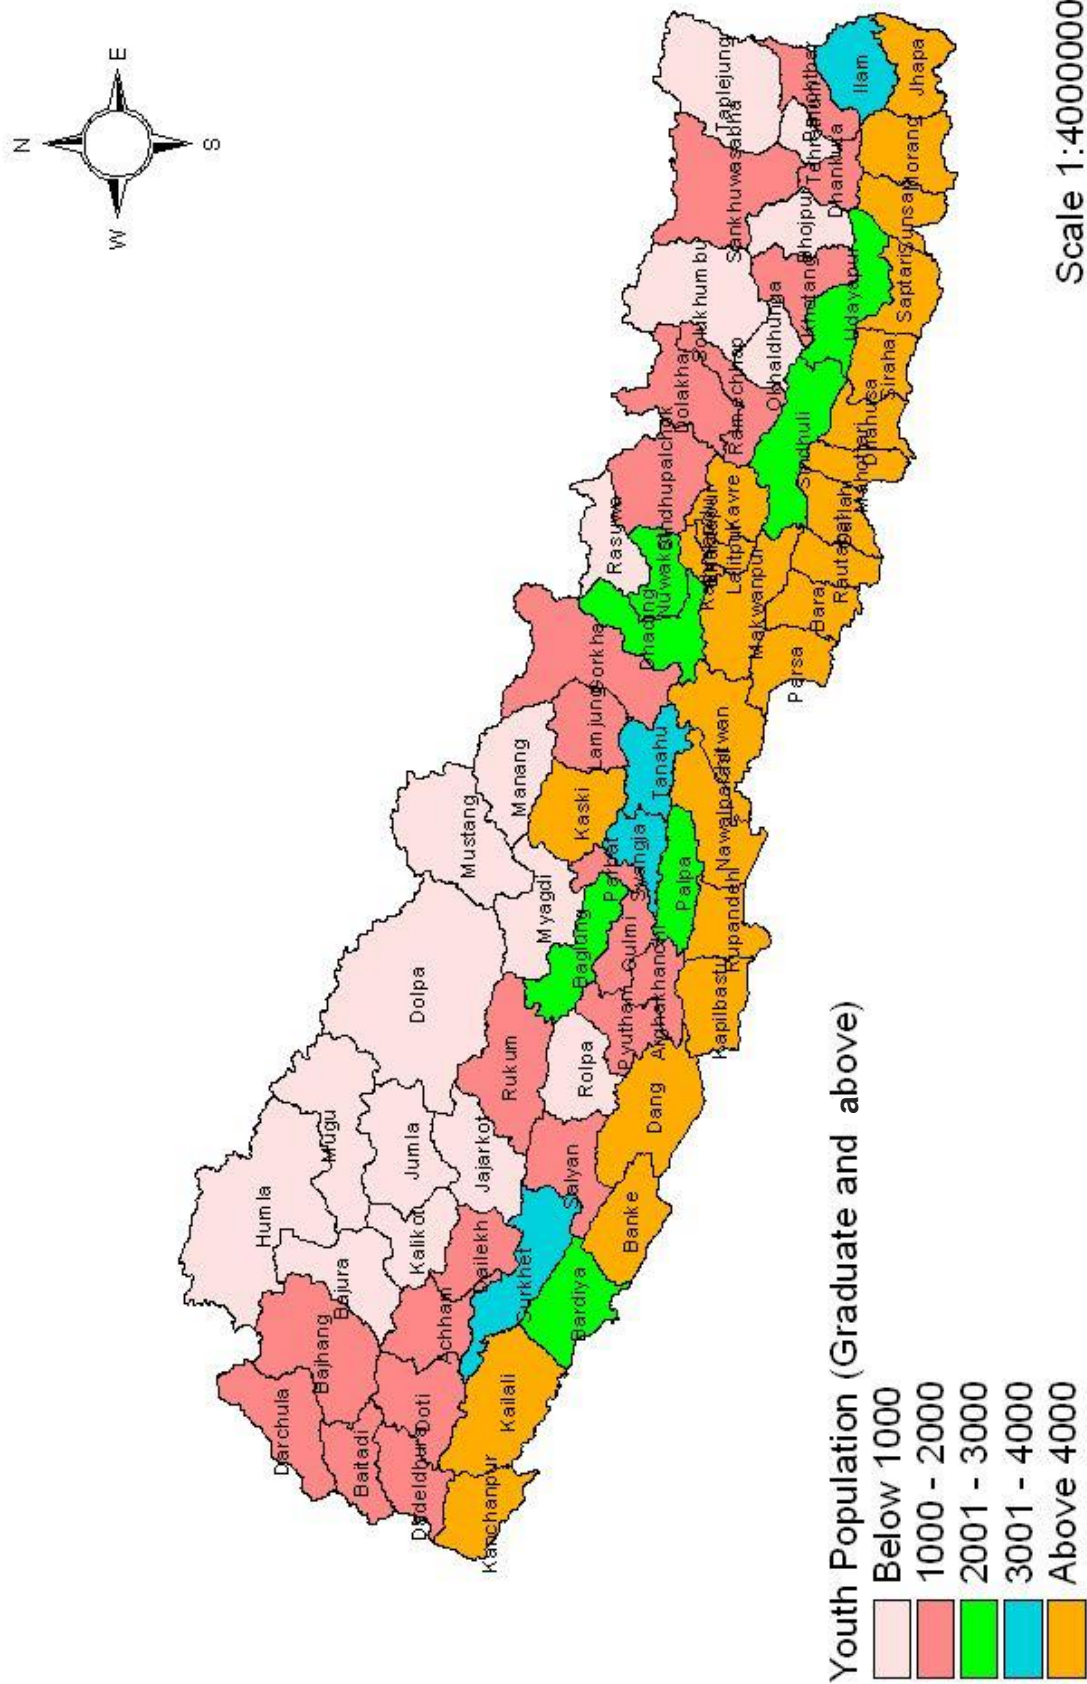

MAP 5: DISTRIBUTION OF YOUTH POPULATION BY THEIR EDUCATIONAL ATTAINMENT (GRADUATE & ABOVE - MALE)

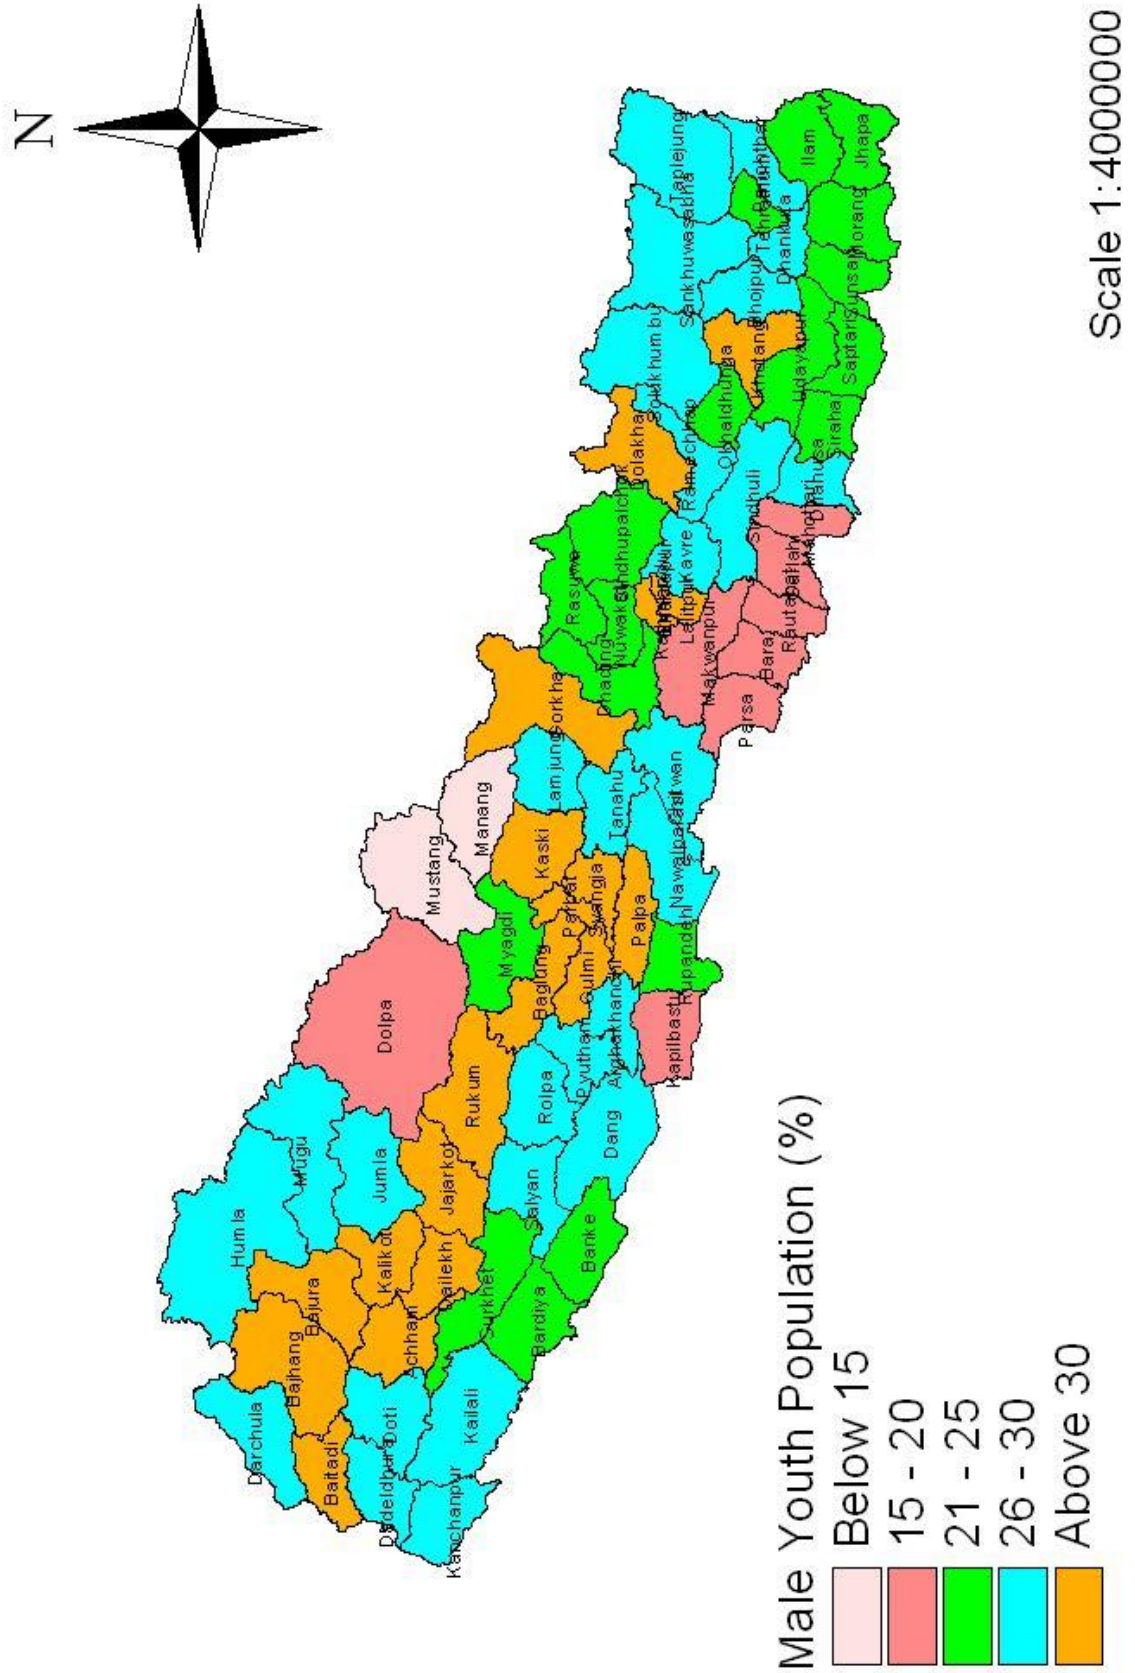

MAP 6: DISTRIBUTION OF YOUTH POPULATION BY THEIR EDUCATIONAL ATTAINMENT (GRADUATE & ABOVE - FEMALE)

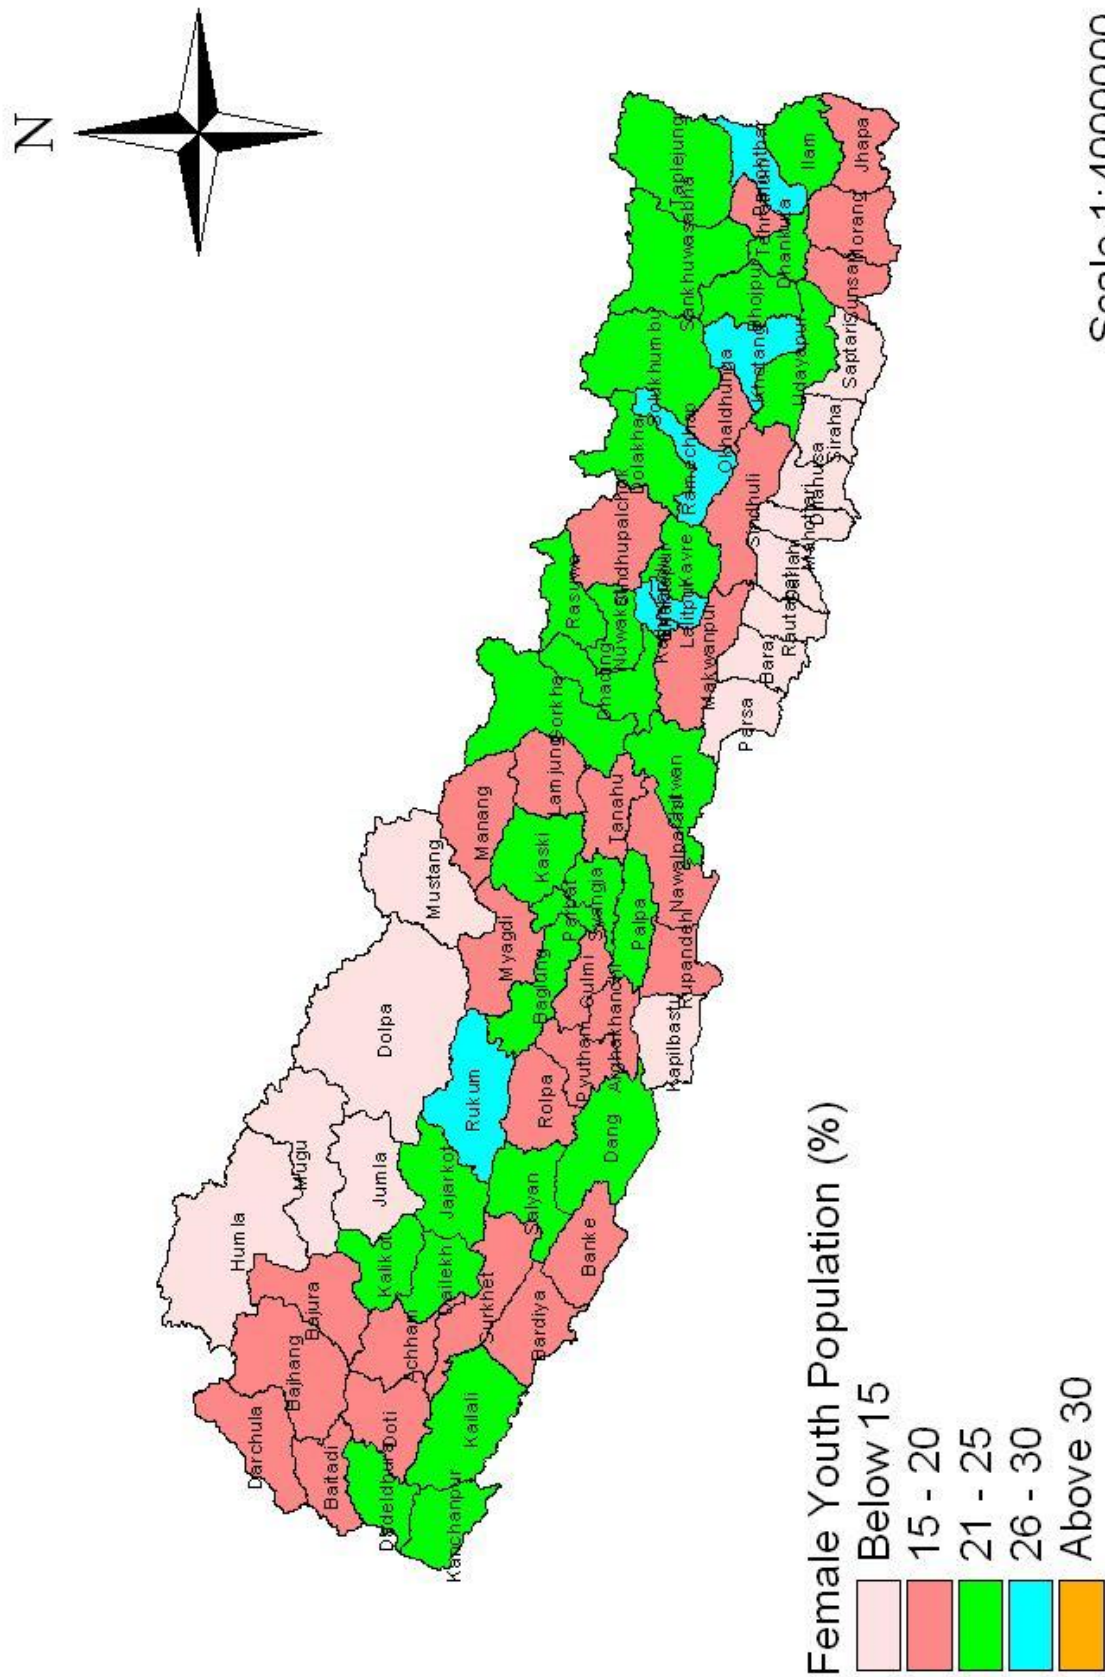

MAP 7: DISTRIBUTION OF YOUTH POPULATION BY THEIR EDUCATIONAL ATTAINMENT (GRADUATE & ABOVE – MALE & FEMALE)

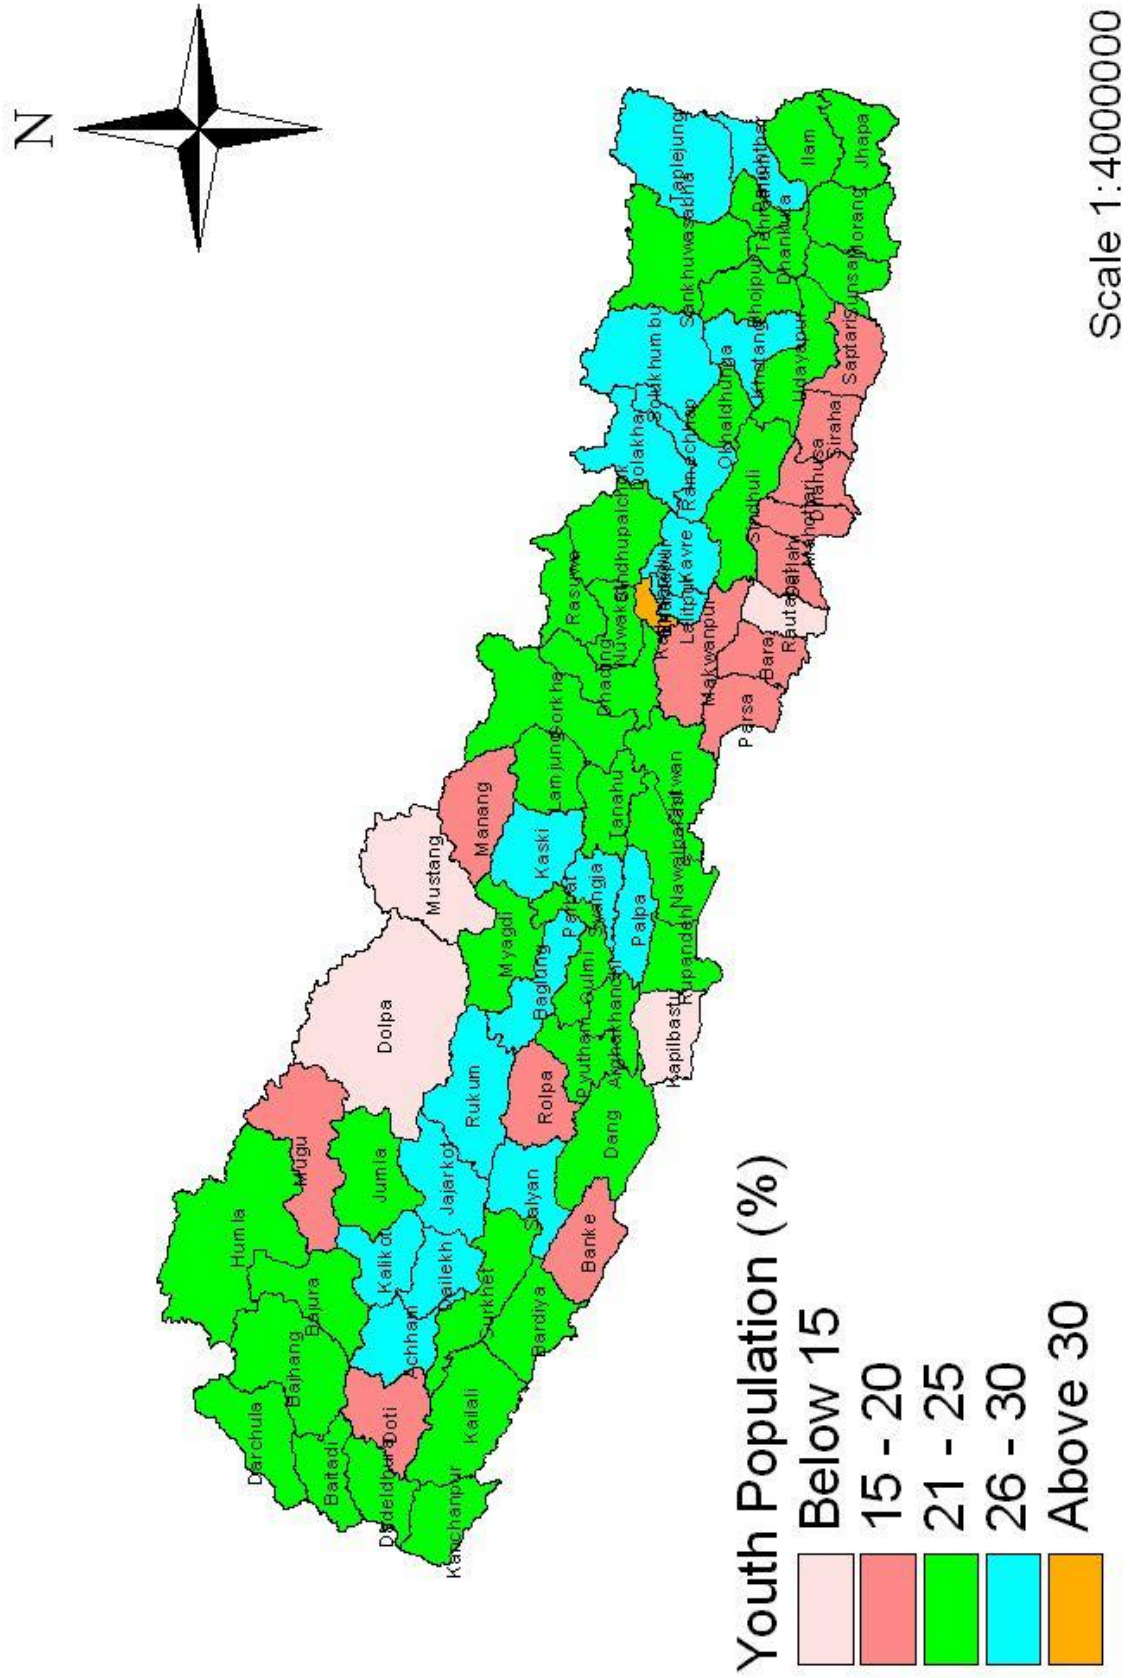

MAP 8: DISTRIBUTION OF MALE YOUTH POPULATION BY THEIR CURRENT SCHOOL ATTENDANCE STATUS

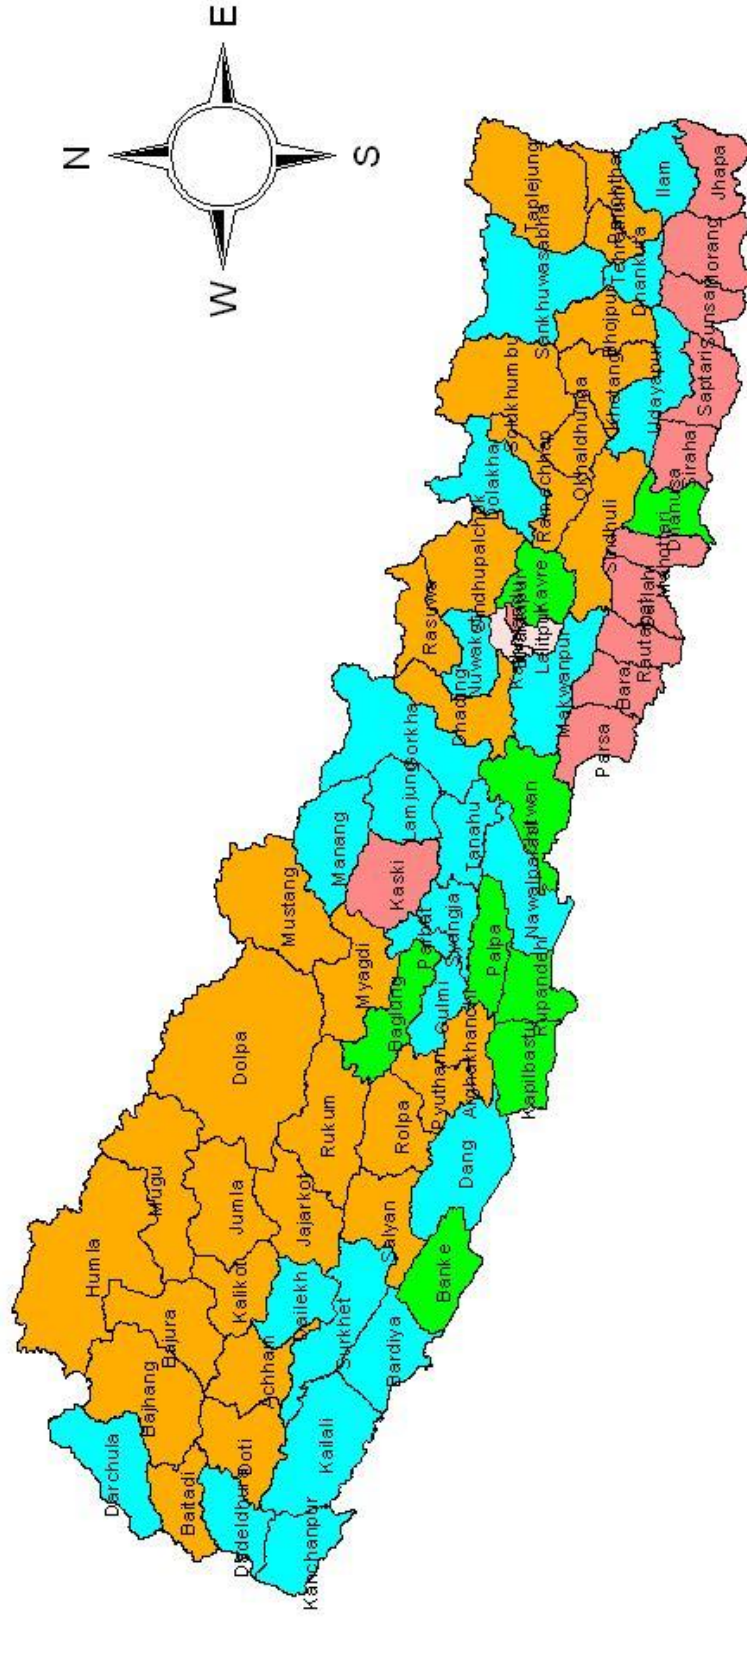

MAP 9: DISTRIBUTION OF FEMALE YOUTH POPULATION BY THEIR CURRENT SCHOOL ATTENDANCE STATUS

MAP 10: DISTRIBUTION OF TOTAL YOUTH POPULATION BY THEIR CURRENT SCHOOL ATTENDANCE STATUS

MAP 15: PERCENTAGE DISTRIBUTION OF YOUTH POPULATION BY THEIR OWN AGRICULTURAL ACTIVITY PERFORMED IN THE LAST 12 MONTHS (PRECEDING THE CENSUS)

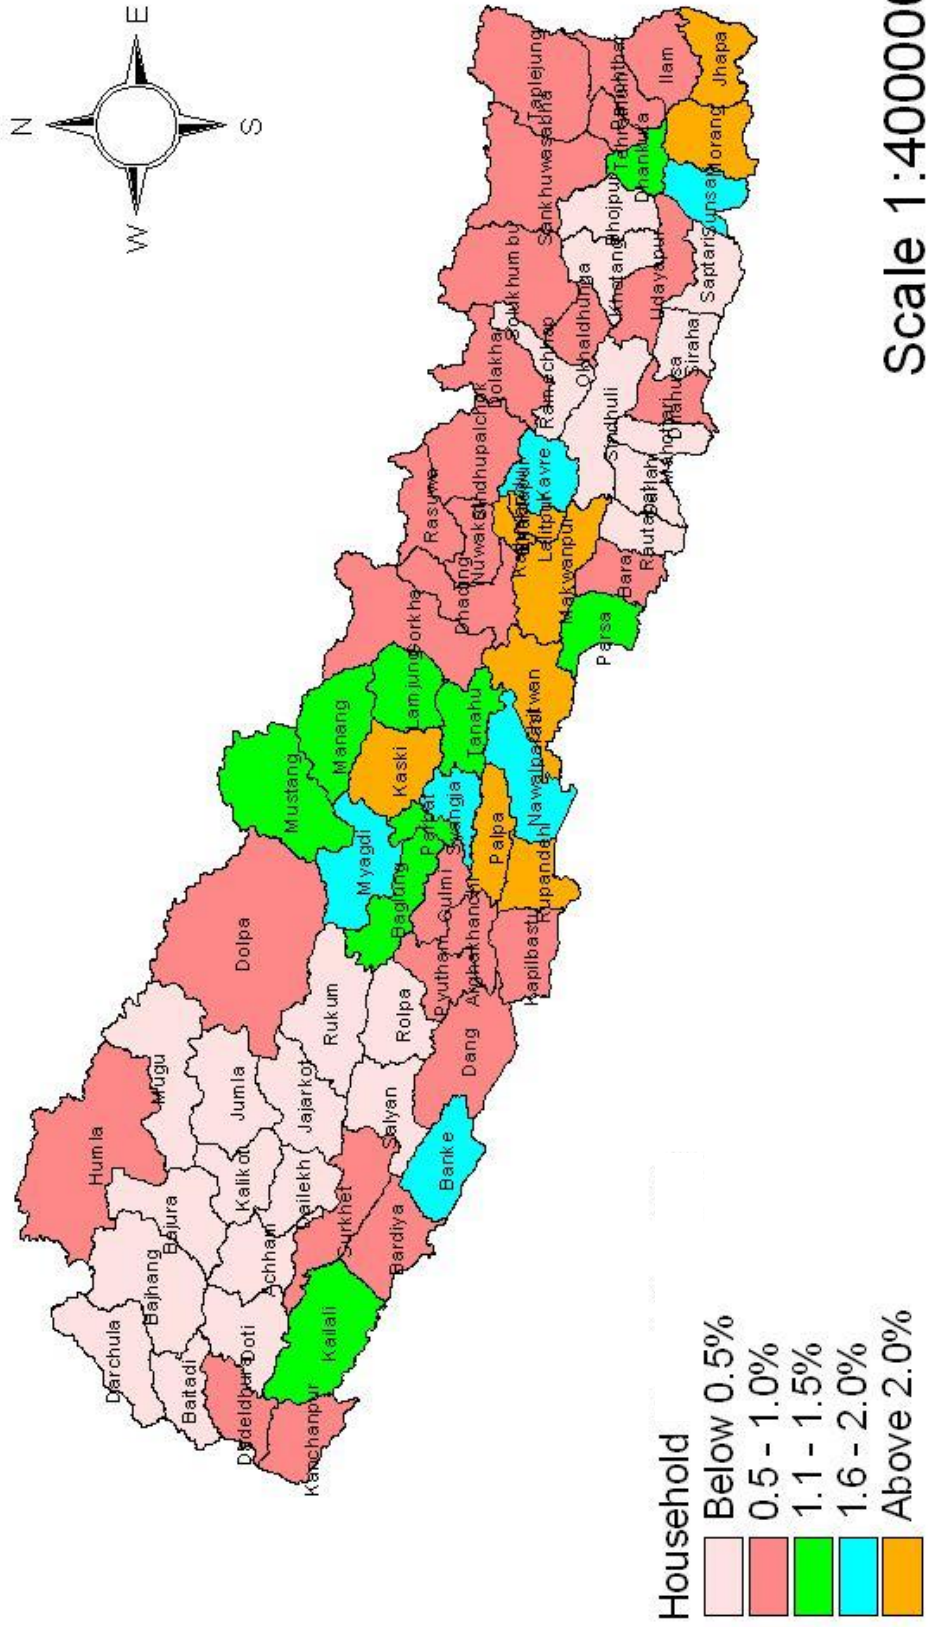

Percentage of youth population

- Below 10
- 10 - 20
- 21 - 30
- 31 - 40
- Above 40

Scale 1:4000000

MAP 17: DISTRIBUTION OF HOUSEHOLDS HAVING FACILITY TO INFORMATION TECHNOLOGY (INTERNET)

MAP 18: DISTRIBUTION OF HOUSEHOLDS HAVING FACILITY TO INFORMATION TECHNOLOGY (MOBILE PHONE)
